
Wave 2 — Runtime Stability and Missing Dependencies

Objective

Resolve confirmed missing dependency and deployment metadata gap.

Findings Resolved

- EXH-003
- EXH-006

Files Affected

- Master_List/Current Production Script/v.1.6.29_Current_Production_Script
- Master_List/appsscript.json or project documentation if manifest remains external

Functions Affected

- organizeWorkbookTabs_
- getSheetTypeForOrganization_

Exact Proposed Changes

1. Replace inferSheetTypeFromName_(sheetName) with getSheetTypeForOrganization_(sheetName) or add a wrapper:
 - inferSheetTypeFromName_(name) { return getSheetTypeForOrganization_(name); }
2. Add/export Master_List/appsscript.json, or document why the manifest is external/container-bound.

Business-Logic Impact

None expected.

Breaking-Change Risk

Low.

Required Tests

- Direct organizeWorkbookTabs_() execution.
- Undefined-helper scan.
- Apps Script manifest validation.
- Save/deploy test.

Recommended Version Increment

If implemented with Wave 1: v1.6.30.

If separate: v1.6.29.1 or v1.6.30, depending on release policy.

Independent?

Yes.

Required User Decisions

- Should the manifest be committed, or is the production project intentionally container-bound with external manifest management?
