
Wave 4 — Performance Improvements

Objective

Optimize confirmed bottlenecks only after machine-readable timing and repeatable profiling exist.

Findings Resolved

- EXH-007
- Supports EXH-012

Files Affected

- Master_List/Current Production Script/v.1.6.29_Current_Production_Script
- Report export artifacts if added

Functions Affected

- formatMonthlySheets
- formatMonthlyRawDataSheetFromSource_
- createRawDataOutputSheetFromTemplateFast_
- Formatting, filter, row-height, visibility, sync helpers

Exact Proposed Changes

1. Add detailed timing marks around:
 - template copy/canvas creation
 - data write
 - filter creation/removal
 - row-height locking
 - hidden-column policy
 - approved-sync columns

- banner-column sync
2. Run baseline timing on 1k/5k/10k rows.
 3. Optimize only measured hotspots:
 - defer nonessential formatting
 - reduce row-height operations
 - reduce filter churn
 - batch visibility/formatting operations

Business-Logic Impact

None intended.

Breaking-Change Risk

Low-Medium; visual formatting changes must be approved if simplified.

Required Tests

- 1k/5k/10k Raw Data performance runs.
- Visual regression on formatted Raw Data.
- Header/date/filter validation.

Recommended Version Increment

v1.6.31 if separated from data-safety release.

Independent?

Yes.

Required User Decisions

- Are any visual formatting concessions acceptable to reduce runtime?
