

Wave 8 - Implementation Recommendation

Conclusion

Ready to implement Wave 1 after approval.

Wave 1 should be limited to critical correctness and data-safety work:

1. Reorder updateDemoPMonthlySync() so Raw Data and replacement rows are validated before any Demo P row removal.
2. Replace high-volume destructive row deletion paths with retained-row rewrite or thresholded rewrite logic.
3. Add pre/post PMR and row-count validation.
4. Strengthen Raw Data source validation.
5. Resolve active-sheet fallback behavior according to approved policy.

Before implementing Wave 1, I need approval on these two policy points:

1. Raw Data source policy: delete, archive, or retain import sheets after formatting?
2. Active-sheet fallback policy: remove fallback entirely, or allow only when the active sheet passes strict Raw Data validation?
