

Master List Framework Specification v2.0

1. Executive Overview

The Master List Framework is the governing system for monthly Raw Data preservation, Demo P processing, Master List creation, Banner synchronization, Care Plan Due and Unlocked Care Plan synchronization, Monthly Change reporting, disenrollment tracking, dashboard-controlled templates, validation, timing, and QA reporting.

The framework is documented according to the Current Approved Production Script v1.6.74.

Framework Specification v2.0 is the governing specification. The Current Approved Production Script v1.6.74 is the implementation authority.

1.1 Framework Purpose

- Define the architecture standards for the Master List Framework.
- Preserve working production business logic and avoid unnecessary rebuilds.
- Govern Raw Data, Demo P, Banner, Care Plan Due, Unlocked Care Plan, Master List, Monthly Change, Disenrolled, Dashboard Quality, templates, timing, and validation workflows.
- Maintain a single-file Apps Script architecture until production stabilization is complete.
- Prioritize template-first formatting, one-pass processing, dashboard configuration caching, and reduced spreadsheet reads/writes.

1.2 Current Production Baseline

Component	Current Role in v1.9	Reference
Framework Specification v2.0	Primary governing authority	Primary governing authority
Current Approved Production Script v1.6.74	Current executable production baseline	Starting script for future development

1.3 Primary PMR Row Architecture

The Primary PMR Row is the authoritative participant row. Primary PMR assignment occurs during Raw Data processing and shall not be reassigned during Demo P, Master List, Disenrolled, or Monthly Change processing.

All synchronized participant-level data from Banner, Care Plan Due, Unlocked Care Plan, HHA, O2, PAP, PERS, contact processing, banner summaries, notes processing, and update tracking must be written to the Primary PMR Row.

Master List now contains Primary PMR Rows only. Secondary/source rows are preserved in Raw Data and Demo P where needed for processing and auditability, but they are not written as secondary operational rows on Master List.

1.4 Dashboard Quality Architecture

Dashboard Quality Report is the authoritative QA artifact. Standalone QA report sheets are retired unless explicitly reintroduced by governance approval. Dashboard Quality must use section-only updates, timestamped section headers, and no final full-report rebuild.

Section	Dashboard Quality Content
A	Template Validation
B	Template Header Audit
C	Test 6 Date Formatting
D	Test 7 Validation Failure

E	Test 9 Monthly Change Subheaders
F	Test 10 Dashboard Audit, including Care Plan Sync validation
G	Framework Health Check, including Care Plan Sync validation
H	Signoff
I	Summary
J	Timing Summary

1.5 Protected Production Architecture

Protected Standard	v1.9 Production Meaning
Single File Architecture	Maintain the framework as one Apps Script file until production stabilization is complete.
Dashboard Driven Formatting	Dashboard configuration remains the formatting and template authority.
Template First Formatting	Build templates once; duplicate/copy templates and paste data during normal processing.
Primary PMR Row Architecture	Assign Primary PMR Row in Raw Data only; synchronize to Primary PMR Row only.
One Pass Processing	Read once, process once, write once whenever practical.
Source Data Preservation	Preserve imported source reports and avoid destructive processing unless explicitly approved.
Dashboard Quality Consolidation	Use Dashboard Quality Report sections A-J as the consolidated QA reporting structure.
Template Header Audit	Use one centralized header audit instead of repeated header verification inside individual processes.
Full Replacement Updates	Production releases must replace affected functions completely and remove obsolete logic.

2. Global Standards

Item	Standard
Source of Truth	Framework Specification v2.0 is the governing authority; Current Approved Production Script v1.6.74 is the executable source of truth.
Date Prompt	User enters month only; system uses MM/01/YYYY. Year remains locked February-November and selectable December-January unless changed by approved production rule.
Standard Font	Arial 10pt black, left aligned, vertical middle.
Header Row	Row 4.
Data Start Row	Row 5.

Freeze	Rows 1-4 and Columns A:B.
Date Display Format	mm/dd/yyyy.
Sheet Date Format	mm.yy.
Delete Blank Rows After	After governed template row count or after row 400 when empty for legacy-compatible report cleanup; template row counts control where defined.
Dashboard Quality Report	Authoritative QA report; replaces standalone Test 6, Test 7, Test 9, Test 10, Template Validation, and Framework Health Check report sheets.
Dashboard Quality Section Timestamp	Every Dashboard Quality section header shall include last run timestamp, status, and duration where available.
Template Header Audit	Required centralized QA process validating required template headers for Raw Data, Banner, Care Plan Due, Unlocked Care Plan, Demo P, Master List, Monthly Change, Disenrolled, and Master List Change Log.
Care Plan Sync Validation	Required inside Dashboard Audit and Framework Health Check; not a separate Dashboard Quality section.
Primary PMR Assignment	Occurs only during Raw Data processing.
Master List Row Standard	Master List contains Primary PMR Rows only.
Demo P Tracking Columns	Demo P template must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet.
Row Height Enforcement	Raw Data, Demo P, Master List, and Disenrolled shall enforce data row height 25 at the end of processing to prevent Notes wrapping from expanding rows.

3. Sheet Layout Standards

Item	Standard
Row 1 - Title Row	Height 25, Level 3 fill. A1 = title, Arial 14pt bold, black, overflow. C1:D1 may contain framework/version notes only if it does not interfere with freeze settings.
Row 2 - Date Row	Height 20, Level 3 fill. A2=Date, B2=Start Date, C2=to, D2=End Date when the sheet uses date ranges.
Row 3 - Spacer Row	Height 10, Level 1 fill, no data.
Row 4 - Header Row	Height 40, Level 2 fill, wrap, horizontal left, vertical top.
Rows 5+	Height 25, Arial 10pt, wrap clip, horizontal left, vertical center.
Merge/Frozen Cell Rule	No merged cells may partially cross frozen rows/columns. Break apart merged cells before applying freeze settings when needed.
Dashboard Quality Layout	Dashboard Quality Report uses governed section headers with timestamp/status/duration metadata. Section tables may vary by test but must remain within the consolidated A-J report.
Final Data Row Height Enforcement	Raw Data, Demo P, Master List, and Disenrolled apply standard data row height 25 at the end of their processing functions.

3.1 Row Height Enforcement Sheets

Sheet Type	Required Final Row Height Action
Raw Data	Apply standard data row height 25 after formatting and framework-owned column additions.
Demo P	Apply standard data row height 25 after copy-first/process-once/write-once processing.
Master List	Apply standard data row height 25 after Master List creation and synchronization.
Disenrolled Exclusion	Apply standard data row height 25 after standalone Disenrolled list creation.

4. Color Management

Sheet Type	Base Color	Use
CP Due Date	#65CC99	Report tabs, templates, headers, dashboard references
Unlock CP	#65CCC3	Report tabs, templates, headers, dashboard references
Banners	#65A9CC	Report tabs, templates, headers, dashboard references
Demo P	#657FCC	Report tabs, templates, headers, dashboard references
Master List	#7665CC	Master List tabs, templates, headers, dashboard references
Monthly Change	#A165CC	Monthly Change tabs, templates, headers, dashboard references
Master List Change Log	#CC65CC	Change log/system sheet
Disenrolled Exclusion List	#CC65A1	Disenrollment tracking/system sheet
Index Sheet	#668BCC	Index tab color
Raw Data	Dashboard -defined	Monthly source/import sheet type; color controlled by dashboard configuration

Dashboard Quality Report	Dashboard -defined	Consolidated QA report; color controlled by dashboard configuration
--------------------------	--------------------	---

4.1 Shade Levels

Level	Lightness	Usage
Level 1	60%	Row 3, sheet tab accents
Level 2	75%	Header row
Level 3	85%	Title rows, current sheet tabs
Level 4	97%	Alternating colors

5. Naming Standards

Sheet Type	Report Title	Date Format	Example
Raw Data	Raw Data	MM.YY	Raw Data 05.26
Demo P	Demographics - Participants	MM.YY	Demo P 05.26
Banners	Banner Report	MM.YY	Banners 05.26
Unlocked CP	Unlocked Care Plan Report	MM.YY	Unlocked CP 05.26
CP Due	Care Plan Due Date Report	MM.YY	CP Due 05.26
Monthly Change	Monthly Change Report	MM.YY	Monthly Change 05.26
Master List	Master List	MM.YY	Master List 05.26
Disenrolled	Disenrolled Exclusion List	MM.YY from prompt	Disenrolled 05.26
ML Change Log	Master List Change Log	No month or as needed	ML Change Log
Dashboard Quality Report	Dashboard Quality Report	No month	Dashboard Quality Report
Timing Report / Current Timing Report	Timing Report	No month	Timing Report

5.1 Naming Rules

- Monthly output sheets use MM.YY in the sheet name.
- Disenrolled Exclusion List uses the prompted month in the output sheet name.
- Dashboard Quality Report is not month-specific; sections record their own timestamps.
- Timing Report remains a framework timing log and Dashboard Quality Section J provides the timing summary.
- Template sheet names shall remain dashboard-controlled and may be hidden/system sheets.

6. Sheet Organization Standards

Organization Rule	v2.0 Standard
Index Sheet	The Index sheet remains first.

Monthly Import Sheets	Monthly import sheets (Raw Data, Banner Report, Care Plan Due Date Report, Unlocked Care Plan Report) are grouped together.
Monthly Active Sheets	Operational sheets follow the import sheets in governed working order.
Visible Working Order	Index, Raw Data, Master List, Demo P, Care Plan Due, Unlocked Care Plan, Banners, Monthly Change.
System Sheets	Dashboard Quality Report, Framework Timing Report, Timing Summary Report, Index and other framework system sheets.
Templates	Template sheets remain grouped at the end of the workbook and are maintained through Create / Refresh Templates.
Tab Colors	Governed dashboard color standards apply.

6.1 Create / Refresh Template Order

Template creation and refresh menu order shall follow the current production standard.

Order	Template
1	Banners
2	CP Due Date
3	Unlocked CP
4	Raw Data
5	Demo P
6	Disenrolled Exclusion
7	Master List
8	Monthly Change

6.2 Dashboard Section C Sheet Definition Order

Format Dashboard SECTION C - SHEET DEFINITIONS shall use the same governed production order as Create / Refresh Templates. Raw Data is a governed sheet type and must appear in Section C.

- Banners
- CP Due Date
- Unlocked CP
- Raw Data
- Demo P
- Disenrolled Exclusion
- Master List
- Monthly Change

7. Dashboard Configuration Standards

The Format Dashboard remains the configuration authority for formatting, templates, sheet definitions, column definitions, validation, timing, and framework QA. Hardcoded formatting shall be minimized and reserved for protected structural standards or fallback/default handling.

In v2.0, dashboard governance is expanded to include consolidated Dashboard Quality reporting, Template Header Audit, Care Plan Sync Validation, and section-only QA updates. The dashboard is a configuration source, not a participant-processing source.

7.1 Dashboard Configuration Authority

Configuration Area	v2.0 Standard
--------------------	---------------

SECTION A - GLOBAL SETTINGS	Date rules, font defaults, freeze settings, row heights, default column width, number and text formats, wrap and alignment defaults, color lightness levels, border standards, and template version.
SECTION B - TITLE ROWS	Governed title-row records for rows 1-4, including sheet type, purpose, value source, label, target cell, height, font size, font weight, fill level, alignment, wrap behavior, and notes.
SECTION C - SHEET DEFINITIONS	Sheet type, report title, template name, output naming pattern, base color, prompt-date behavior, end-date source, template row and column counts, row mode, minimum rows, buffer rows, test rows, and test-row behavior.
SECTION D - COLUMN DEFINITIONS	Header, width, header font size, date-column status, hidden-column status, data wrap, horizontal alignment, vertical alignment, and number format.
SECTION E - SHEET BEHAVIORS	Title-row use, filter use, alternating-color use, subheader use, hidden-template behavior, and output visibility.
SECTION F - SHEET HEADERS	Required sheet type, column order, header name, and source-of-data mapping for every governed sheet.
SECTION G - SYSTEM SHEET SURFACES	System sheet name, display name, sort order, output visibility, title fill color, title font color, global-default behavior, and system-surface notes.
Dashboard Quality Definitions	Dashboard Quality section ownership, timestamp requirements, section-only write behavior, consolidated report structure, and governed Quick and Workflow execution.
Timing Definitions	Framework Timing Report logging, combined timing reporting, performance summary, and Dashboard Quality timing participation.
Template Signatures and Refresh	Template signature validation, smart refresh behavior, fast refresh behavior, and governed full-rebuild fallback.
Dashboard Read and Cache Behavior	Dashboard configuration, header, header-map, sheet-dimension, monthly-sheet lookup, and template-signature cache behavior.

7.2 Dashboard Quality Report Governance

Dashboard Quality Report is the single consolidated QA report. It replaces standalone QA report sheets for Template Validation, Date Formatting, Validation Failure, Monthly Change Subheader, Dashboard Audit, Framework Health Check, and related QA summaries. Tests shall update only their assigned section. The Dashboard Quality report shall not be deleted, recreated from a hidden template, fully rebuilt, or fully rewritten during normal QA execution.

Rule	Requirement
Section-only updates	Each test writes only its assigned Dashboard Quality section.
Timestamped section headers	Each section header includes Last Run timestamp, status, and duration when available.
No hidden-template creation	Dashboard Quality Report shall not be generated from a hidden template as a normal test step.
No full rebuild	Run All Framework Tests + Dashboard shall not end by rebuilding the full Dashboard Quality report.
No standalone QA report sheets	Standalone Test 6, Test 7, Test 9, Test 10, Template Validation, and Framework Health Check report sheets are retired.

Summary and timing	Section I Summary and Section J Timing Summary are updated after the underlying sections have been written.
--------------------	---

7.3 Dashboard Read and Cache Standard

- Dashboard configuration shall be loaded once per process whenever practical.
- Dashboard configuration shall not be repeatedly read inside participant-processing loops.
- Template builders and QA tests may read dashboard configuration, but monthly participant processing should use cached configuration or verified templates.
- Dashboard tables should be treated as configuration tables and not as row-by-row processing sources.

8. Dashboard Configuration Tables

Appendix A remains the complete dashboard column configuration table and must be rebuilt from current production headers during the Appendix phase. Formatter and template builders must use 8.1 Dashboard Control Fields

Control	Required	Description
Column Width	Yes	Pixel width for each header.
Header Font Size	Yes	Font size for row 4 header display.
Data Font Size	Yes	Font size for rows 5+.
Date Format	Yes for dates	Applies mm/dd/yyyy display to configured date columns.
Hidden Column	Yes	Whether columns should be hidden after formatting.
Wrap Mode	Yes	Row 4 wrap; data rows clip unless overridden.
Horizontal Alignment	Yes	Default left.
Vertical Alignment	Yes	Headers top, data middle.
Row Height	Yes	Rows 1-4 and data rows.
Freeze Settings	Yes	Rows 1-4 and Columns A:B.
Template Row Count	Yes for templates	Defines the governed template row capacity.
Template Header Audit	Yes	Identifies whether the sheet participates in centralized template header audit.
Dashboard Quality Section	Yes for QA tests	Defines section ownership for consolidated Dashboard Quality Report.
Timing Participation	Yes for timed workflows	Defines whether a process logs to Current Timing Report and Dashboard Quality Section J.
Template Signature	Yes	Template signature validation.
Output Visibility	Yes	Hidden/visible output.
System Surface	Yes	Framework system sheet.
Cache Participation	Yes	Dashboard cache participation.

8.2 Dashboard Quality Section Ownership Table

Section	Owner / Test - Current Section Title	Purpose	Write Rule
A	SECTION A - GLOBAL INPUTS VERIFICATION	Validate Format Dashboard global settings and required title-row governance inputs.	Section A only.

B	SECTION B - SHEET DEFINITIONS VERIFICATION	Validate governed Format Dashboard sheet definitions.	Section B only.
C	SECTION C - SHEET HEADERS VERIFICATION	Validate governed sheet header definitions and source mappings.	Section C only.
D	SECTION D - COLUMN DEFINITIONS VERIFICATION	Validate governed column definitions, widths, formats, visibility, wrap, and alignment settings.	Section D only.
E	SECTION E - SHEET BEHAVIOR VERIFICATION	Validate governed sheet behavior configuration and output visibility.	Section E only.
F	SECTION F - TEMPLATE STRUCTURE & VALIDATION	Validate template structure, required templates, row capacity, and template-level configuration.	Section F only.
H	SECTION H - FRAMEWORK HEALTH CHECK	Validate framework readiness, required functions, dependencies, and governed framework surfaces.	Section H only.
I	SECTION I - PERFORMANCE SUMMARY	Summarize timing and performance findings from the framework timing architecture.	Section I only.
J	SECTION J - MASTER LIST VALIDATION	Validate Master List structure, Primary PMR ownership, and required Master List outputs.	Section J only.
K	SECTION K - CARE PLAN SYNC VALIDATION	Validate Care Plan Due and Unlocked Care Plan synchronization to the authoritative Master List month.	Section K only.
L	SECTION L - WORKFLOW & SYNCHRONIZATION VERIFICATION	Verify contact processing, phone split, address combine, language handling, notes summary, banner summary, Care Plan synchronization, and Primary PMR assignment.	Section L only.
M	SECTION M - SUMMARY	Summarize consolidated Dashboard Quality results.	Section M only.
N	SECTION N - SIGNOFF	Provide release readiness and signoff status.	Section N only.

8.3 Governed Template / Sheet Definition Order

Format Dashboard SECTION C - SHEET DEFINITIONS shall use the governed production order. The Create / Refresh Templates order shall remain aligned with the governed template-producing sheet definitions.

Order	Sheet / Template Definition	Header Audit Required
1	Banners	
2	CP Due Date	
3	Unlocked CP	
4	Raw Data	
5	Demo P	
6	Disenrolled Exclusion	
7	Master List	
8	Monthly Change	

8.4 Template Row Count Standards

Template	Approved Row Count
Raw Data	6500
Banners	400

CP Due Date	400
Unlock CP	400
Demo P	2500
Master List	400
Monthly Change	1000
Disenrolled Exclusion List	800
Master List Change Log	1000

8.5 Header Validation Standard

Template Header Audit is the single authoritative header validation process. Individual formatter, synchronization, and processing functions shall not duplicate full header verification logic except for minimal defensive checks required to prevent destructive writes or runtime errors.

6. Sheet Organization Standards

Organization Rule	v2.0 Standard
Index Sheet	The Index sheet remains first.
Monthly Import Sheets	Monthly import sheets (Raw Data, Banner Report, Care Plan Due Date Report, Unlocked Care Plan Report) are grouped together.
Monthly Active Sheets	Operational sheets follow the import sheets in governed working order.
Visible Working Order	Index, Raw Data, Master List, Demo P, Care Plan Due, Unlocked Care Plan, Banners, Monthly Change.
System Sheets	Dashboard Quality Report, Framework Timing Report, Timing Summary Report, Index and other framework system sheets.
Templates	Template sheets remain grouped at the end of the workbook and are maintained through Create / Refresh Templates.
Tab Colors	Governed dashboard color standards apply.

6.1 Create / Refresh Template Order

Template creation and refresh menu order shall follow the current production standard.

Order	Template
1	Banners
2	CP Due Date
3	Unlocked CP
4	Raw Data
5	Demo P
6	Disenrolled Exclusion
7	Master List
8	Monthly Change

6.2 Dashboard Section C Sheet Definition Order

Format Dashboard SECTION C - SHEET DEFINITIONS shall use the same governed production order as Create / Refresh Templates. Raw Data is a governed sheet type and must appear in Section C.

- Banners
- CP Due Date
- Unlocked CP

- Raw Data
- Demo P
- Disenrolled Exclusion
- Master List
- Monthly Change

7. Dashboard Configuration Standards

The Format Dashboard remains the configuration authority for formatting, templates, sheet definitions, column definitions, validation, timing, and framework QA. Hardcoded formatting shall be minimized and reserved for protected structural standards or fallback/default handling.

In v2.0, dashboard governance is expanded to include consolidated Dashboard Quality reporting, Template Header Audit, Care Plan Sync Validation, and section-only QA updates. The dashboard is a configuration source, not a participant-processing source.

7.1 Dashboard Configuration Authority

Configuration Area	v2.0 Standard
SECTION A - GLOBAL SETTINGS	Date rules, font defaults, freeze settings, row heights, default column width, number and text formats, wrap and alignment defaults, color lightness levels, border standards, and template version.
SECTION B - TITLE ROWS	Governed title-row records for rows 1-4, including sheet type, purpose, value source, label, target cell, height, font size, font weight, fill level, alignment, wrap behavior, and notes.
SECTION C - SHEET DEFINITIONS	Sheet type, report title, template name, output naming pattern, base color, prompt-date behavior, end-date source, template row and column counts, row mode, minimum rows, buffer rows, test rows, and test-row behavior.
SECTION D - COLUMN DEFINITIONS	Header, width, header font size, date-column status, hidden-column status, data wrap, horizontal alignment, vertical alignment, and number format.
SECTION E - SHEET BEHAVIORS	Title-row use, filter use, alternating-color use, subheader use, hidden-template behavior, and output visibility.
SECTION F - SHEET HEADERS	Required sheet type, column order, header name, and source-of-data mapping for every governed sheet.
SECTION G - SYSTEM SHEET SURFACES	System sheet name, display name, sort order, output visibility, title fill color, title font color, global-default behavior, and system-surface notes.
Dashboard Quality Definitions	Dashboard Quality section ownership, timestamp requirements, section-only write behavior, consolidated report structure, and governed Quick and Workflow execution.
Timing Definitions	Framework Timing Report logging, combined timing reporting, performance summary, and Dashboard Quality timing participation.
Template Signatures and Refresh	Template signature validation, smart refresh behavior, fast refresh behavior, and governed full-rebuild fallback.
Dashboard Read and Cache Behavior	Dashboard configuration, header, header-map, sheet-dimension, monthly-sheet lookup, and template-signature cache behavior.

7.2 Dashboard Quality Report Governance

Dashboard Quality Report is the single consolidated QA report. It replaces standalone QA report sheets for Template Validation, Date Formatting, Validation Failure, Monthly Change Subheader, Dashboard Audit, Framework Health Check, and related QA summaries. Tests shall update only their assigned section. The

Dashboard Quality report shall not be deleted, recreated from a hidden template, fully rebuilt, or fully rewritten during normal QA execution.

Rule	Requirement
Section-only updates	Each test writes only its assigned Dashboard Quality section.
Timestamped section headers	Each section header includes Last Run timestamp, status, and duration when available.
No hidden-template creation	Dashboard Quality Report shall not be generated from a hidden template as a normal test step.
No full rebuild	Run All Framework Tests + Dashboard shall not end by rebuilding the full Dashboard Quality report.
No standalone QA report sheets	Standalone Test 6, Test 7, Test 9, Test 10, Template Validation, and Framework Health Check report sheets are retired.
Summary and timing	Section I Summary and Section J Timing Summary are updated after the underlying sections have been written.

7.3 Dashboard Read and Cache Standard

- Dashboard configuration shall be loaded once per process whenever practical.
- Dashboard configuration shall not be repeatedly read inside participant-processing loops.
- Template builders and QA tests may read dashboard configuration, but monthly participant processing should use cached configuration or verified templates.
- Dashboard tables should be treated as configuration tables and not as row-by-row processing sources.

8. Dashboard Configuration Tables

Appendix A remains the complete dashboard column configuration table and must be rebuilt from current production headers during the Appendix phase. Formatter and template builders must use 8.1 Dashboard Control Fields

Control	Required	Description
Column Width	Yes	Pixel width for each header.
Header Font Size	Yes	Font size for row 4 header display.
Data Font Size	Yes	Font size for rows 5+.
Date Format	Yes for dates	Applies mm/dd/yyyy display to configured date columns.
Hidden Column	Yes	Whether columns should be hidden after formatting.
Wrap Mode	Yes	Row 4 wrap; data rows clip unless overridden.
Horizontal Alignment	Yes	Default left.
Vertical Alignment	Yes	Headers top, data middle.
Row Height	Yes	Rows 1-4 and data rows.
Freeze Settings	Yes	Rows 1-4 and Columns A:B.
Template Row Count	Yes for templates	Defines the governed template row capacity.
Template Header Audit	Yes	Identifies whether the sheet participates in centralized template header audit.
Dashboard Quality Section	Yes for QA tests	Defines section ownership for consolidated Dashboard Quality Report.

Timing Participation	Yes for timed workflows	Defines whether a process logs to Current Timing Report and Dashboard Quality Section J.
Template Signature	Yes	Template signature validation.
Output Visibility	Yes	Hidden/visible output.
System Surface	Yes	Framework system sheet.
Cache Participation	Yes	Dashboard cache participation.

8.2 Dashboard Quality Section Ownership Table

Section	Owner / Test - Current Section Title	Purpose	Write Rule
A	SECTION A - GLOBAL INPUTS VERIFICATION	Validate Format Dashboard global settings and required title-row governance inputs.	Section A only.
B	SECTION B - SHEET DEFINITIONS VERIFICATION	Validate governed Format Dashboard sheet definitions.	Section B only.
C	SECTION C - SHEET HEADERS VERIFICATION	Validate governed sheet header definitions and source mappings.	Section C only.
D	SECTION D - COLUMN DEFINITIONS VERIFICATION	Validate governed column definitions, widths, formats, visibility, wrap, and alignment settings.	Section D only.
E	SECTION E - SHEET BEHAVIOR VERIFICATION	Validate governed sheet behavior configuration and output visibility.	Section E only.
F	SECTION F - TEMPLATE STRUCTURE & VALIDATION	Validate template structure, required templates, row capacity, and template-level configuration.	Section F only.
H	SECTION H - FRAMEWORK HEALTH CHECK	Validate framework readiness, required functions, dependencies, and governed framework surfaces.	Section H only.
I	SECTION I - PERFORMANCE SUMMARY	Summarize timing and performance findings from the framework timing architecture.	Section I only.
J	SECTION J - MASTER LIST VALIDATION	Validate Master List structure, Primary PMR ownership, and required Master List outputs.	Section J only.
K	SECTION K - CARE PLAN SYNC VALIDATION	Validate Care Plan Due and Unlocked Care Plan synchronization to the authoritative Master List month.	Section K only.
L	SECTION L - WORKFLOW & SYNCHRONIZATION VERIFICATION	Verify contact processing, phone split, address combine, language handling, notes summary, banner summary, Care Plan synchronization, and Primary PMR assignment.	Section L only.
M	SECTION M - SUMMARY	Summarize consolidated Dashboard Quality results.	Section M only.
N	SECTION N - SIGNOFF	Provide release readiness and signoff status.	Section N only.

8.3 Governed Template / Sheet Definition Order

Format Dashboard SECTION C - SHEET DEFINITIONS shall use the governed production order. The Create / Refresh Templates order shall remain aligned with the governed template-producing sheet definitions.

Order	Sheet / Template Definition	Header Audit Required
1	Banners	
2	CP Due Date	

3	Unlocked CP	
4	Raw Data	
5	Demo P	
6	Disenrolled Exclusion	
7	Master List	
8	Monthly Change	

8.4 Template Row Count Standards

Template	Approved Row Count
Raw Data	6500
Banners	400
CP Due Date	400
Unlock CP	400
Demo P	2500
Master List	400
Monthly Change	1000
Disenrolled Exclusion List	800
Master List Change Log	1000

8.5 Header Validation Standard

Template Header Audit is the single authoritative header validation process. Individual formatter, synchronization, and processing functions shall not duplicate full header verification logic except for minimal defensive checks required to prevent destructive writes or runtime errors.

9. Data Source Mapping Standards

Every governed sheet must have a formal header-to-source mapping. Appendix C contains the authoritative mapping tables and must be rebuilt from current production headers. This section defines the governing mapping terminology and required synchronization standards.

Mapping Term	Definition
Raw Data	Pulled directly from the monthly report import. Raw Data is the source of Primary PMR Row assignment.
Demo P	Copied or derived from formatted active Raw Data rows. Demo P uses copy-first/process-once/write-once architecture.
Sync from Banners	Updated from the Banners after Banner processing.
Sync Unlock CP	Updated from the Unlock CP using PMR-based matching.
Sync Care Plan Due	Updated from the CP Due Date using Participant Name + Enrollment Date matched to Participant Name + Capitation Date.
Process	Generated by script logic such as address combining, notes, contact summaries, Banner Summary, phone labeling, Primary PMR Row designation, or update tracking.
<blank>	Intentionally present but not populated by current workflow.
Dashboard Quality	Generated by QA tests and framework health checks into the consolidated Dashboard Quality Report.

Timing	Generated by timing logger into Current Timing Report and summarized in Dashboard Quality Section J.
--------	--

9.1 Required Source Mapping Governance

- Raw Data must preserve source columns and add only approved framework-owned columns.
- Primary PMR Row must be assigned in Raw Data and copied downstream.
- Demo P must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet.
- Master List must include Master List Update Status, Master List Update Month, and Master List Source Sheet.
- Care Plan fields synchronize to Master List Primary PMR Rows only.
- Banner fields synchronize to Master List Primary PMR Rows only.
- Disenrolled output is built through the standalone Create Disenrolled List workflow using the prompted month and current approved column set.

9.2 Care Plan Synchronization Mapping Standard

Source	Match Rule	Fields Synchronized	Destination
Unlocked Care Plan	Unlocked CP PMR # matches Master List Participant PMR#.	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date.	Master List Primary PMR Row
Care Plan Due	Care Plan Due Participant Name + Enrollment Date matches Master List Participant Name + Capitation Date.	Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type.	Master List Primary PMR Row
Banner Report	Participant PMR#	Banner fields and Banner Summary	Master List Primary PMR Row

Care Plan Sync validation belongs in Dashboard Quality Section F - Dashboard Audit and Section G - Framework Health Check. It shall not be implemented as a separate Dashboard Quality section.

9.3 Demo P Update Tracking Mapping Standard

Header	Source	Required Value Standard
Demo P Update Status	Process	Created / Updated / Processed status as produced by Demo P processing.
Demo P Update Month	Process	Current processing month in mm.yy format.
Demo P Source Sheet	Process	Raw Data mm.yy source sheet name.

9.4 Master List Update Tracking Mapping Standard

Header	Source	Required Value Standard
Master List Update Status	Process	Created / Updated / Unchanged / Synced status as produced by Master List processing.
Master List Update Month	Process	Current processing month in mm.yy format.
Master List Source Sheet	Process	Demo P mm.yy source sheet name or approved source sheet reference.

10. Monthly Change Report Rules

Rule Area	v1.9 Rule
Required Sections	Enrollments, Disenrollments, Demographic Changes, Caseload Changes, Contact Changes, Banner Changes, Care Plan Changes.
Duplicates	No duplicates are allowed except approved Contact Changes logic.
Enrollments	Included when Capitation Date is the current report month.
Disenrollments	Included when Disenrollment Date, Disenrollment Effective Date, or Date of Death meets the previous-month/current workflow rule.
Contact Fields	Route to Contact Changes according to approved current production logic.
Banner Fields	Route to Banner Changes.
Caseload Fields	Route to Caseload Changes.
Oxygen	Routes to Service Changes unless superseded by final business rule.
Primary PMR Row-only Changes	Handled as Primary Row Update without replacing all participant source/detail rows.
Raw Data/Demo P Primary Rows Only	Monthly Change processing compares against the current Raw Data/Demo P Primary PMR row architecture and shall not recreate secondary Master List rows.
Standalone Disenrolled	Disenrolled Exclusion List is created through its standalone workflow and may be used to exclude disenrolled participants from inappropriate non-disenrollment change reporting.

10.1 Monthly Change Preservation Rule

Monthly Change logic shall follow the Current Approved Production Script v1.6.74. Preserve approved business logic while optimizing performance and maintaining Primary PMR ownership.

11. Master List Processing Rules

Master List is the primary operational participant repository. In v2.0 , Master List contains Primary PMR Rows only. This replaces prior language that retained secondary rows on Master List as operational source/detail rows. Source/detail rows remain available in Raw Data and Demo P where needed for processing, but Master List is now the consolidated Primary PMR operational view.

Processing Rule	v1.9 Standard
Primary Operational Repository	Master List is the primary operational participant repository.
Row Architecture	Master List contains Primary PMR Rows only.
Synchronization Target	Only the Primary PMR Row is the downstream synchronization target.
Sync-Derived Values	All sync-derived values must be consolidated onto the Primary PMR Row.
Source/Detail Rows	Source/detail rows are retained in Raw Data and Demo P where needed for processing and auditability, but shall not be written as secondary operational Master List rows.
Processing Includes	Banner Summary, address processing, language processing, split and label phones, contact summary, notes combination, update tracking, synchronization, sorting if retained by production script, and validation.
One Pass Update Architecture	Compare current Demo P to prior Master List, identify changed participants/Primary PMR rows, and update only necessary rows.

Primary PMR-Only Changes	If changes are limited to Primary PMR Row fields, replace/update only the Primary PMR Row.
Care Plan Sync	Unlocked CP sync and Care Plan Due sync must populate Master List Primary PMR Rows only.
Update Tracking	Master List Update Status, Master List Update Month, and Master List Source Sheet are governed process fields.

11.1 PRIMARY PMR OWNERSHIP STANDARD

Purpose

The Primary PMR Row is the authoritative participant record within the Master List Framework. It serves as the official synchronization target for participant-level information and controls participant-level reporting, processing, update tracking, and downstream reporting.

Primary PMR Row Definition

- Every participant shall have exactly one Primary PMR Row.
- The Primary PMR Row shall be identified using the Primary PMR Row field.
- Primary PMR Row assignment occurs during Raw Data processing only.
- The Primary PMR Row field shall be copied to Demo P and used downstream, but not reassigned downstream.
- Demo P, Master List, Monthly Change, and Disenrolled shall not perform a sequential block scan to reassign Primary PMR ownership.

Ownership Rules

All participant-level synchronized data shall be written only to the Primary PMR Row.

Data Category	Ownership Target
Banner fields	Primary PMR Row
Care Plan fields	Primary PMR Row
Unlocked CP fields	Primary PMR Row
HHA fields	Primary PMR Row
O2 fields	Primary PMR Row
PAP fields	Primary PMR Row
PERS fields	Primary PMR Row
Processing summaries	Primary PMR Row
Contact summaries	Primary PMR Row
Notes summaries	Primary PMR Row
Banner Summary	Primary PMR Row
Contact Summary	Primary PMR Row
Participant Summary fields	Primary PMR Row
Update tracking fields	Primary PMR Row

Source / Detail Row Rules

- Raw Data may contain source rows and supporting detail rows.
- Demo P may preserve copied active rows required for processing and auditability.
- Source/detail rows may contain contact records, phone records, service records, or supporting participant data.
- Source/detail rows shall not be used as downstream synchronization targets.

- Master List shall contain Primary PMR Rows only.

Monthly Update Rules

- If monthly changes affect only Primary PMR Row fields, replace/update the Primary PMR Row only.
- If source/detail fields change, process those changes through Raw Data/Demo P logic and update only the affected Primary PMR output row or related report output.
- Do not replace all participant rows when only Primary PMR fields change.

Synchronization Rules

- All external synchronization processes shall target the Primary PMR Row.
- Banner synchronization shall target the Primary PMR Row.
- Care Plan Due synchronization shall target the Primary PMR Row.
- Unlocked CP synchronization shall target the Primary PMR Row.
- HHA, O2, PAP, and PERS synchronization shall target the Primary PMR Row.

Protected Standard

Primary PMR Ownership is a protected framework standard. It may not be removed, bypassed, or modified without explicit approval.

11.2 One Pass Processing Standard

Purpose

The One Pass Processing Standard minimizes spreadsheet interaction overhead by optimizing read and write operations. It applies to Master List processing and, where practical, to Raw Data, Demo P, Banner, Care Plan, Monthly Change, and Disenrolled workflows.

Processing Rule

Framework execution logic shall perform consolidated reads, in-memory processing, and consolidated writes whenever practical.

Processing Step	v1.9 Standard
Read	Read required sheet values once or in the fewest practical bulk reads.
Process	Construct Banner Summary flags, execute address processing, generate contact summaries, aggregate notes, apply phone labels, apply update tracking, and use existing Primary PMR Row ownership.
Write	Commit processed values to the sheet in a final consolidated write stage whenever practical.

Specific Demo P Correction

- Demo P shall copy active Raw Data rows first, then process once, then write once.
- Demo P shall not verify or reassign Primary PMR Row because Primary PMR ownership is assigned in Raw Data and copied to Demo P.
- Demo P shall not perform Banner source memory synchronization as a separate processing pass.

Performance Goal

Eliminate redundant sheet-wide I/O cycles for identical data objects to ensure framework scalability. Avoid repeated getValues(), setValues(), dashboard reads, formatting passes, and participant reprocessing loops.

11.3 Synchronization Ownership Matrix

Source	Match Rule	Target	Notes
--------	------------	--------	-------

Banner	Participant PMR# / approved Banner matching logic	Primary PMR Row	Banner flags and Banner Summary synchronize to Primary PMR Row.
Care Plan Due	Participant Name + Enrollment Date to Participant Name + Capitation Date	Primary PMR Row	Sync Enrollment Date, Last Care Plan, Next Care Plan Due, CP Type.
Unlocked Care Plan	PMR # to Participant PMR#	Primary PMR Row	Sync Participant Name, PMR #, IDT Meeting Date, Care Plan Start Date.
HHA CP	Approved HHA CP matching logic	Primary PMR Row	Target remains Primary PMR Row.
HHA ISR	Approved HHA ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
O2 ISR	Approved O2 ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
PAP ISR	Approved PAP ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
PERS ISR	Approved PERS ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
Secondary Contact Rows	Not a synchronization target	Contact Processing Only	Contact/source rows are used for processing, not sync target output.
Demo P Update Tracking	Process generated	Primary PMR Row	Demo P Update Status, Month, Source Sheet.
Master List Update Tracking	Process generated	Primary PMR Row	Master List Update Status, Month, Source Sheet.

11.3.1 Care Plan Sync Validation Ownership

Validation	Dashboard Quality Location	Purpose
Unlocked CP Sync Validation	Section F Dashboard Audit and Section G Framework Health Check	Verify PMR-based sync and missing/unmatched CP fields.
Care Plan Due Sync Validation	Section F Dashboard Audit and Section G Framework Health Check	Verify Participant Name + Enrollment Date to Participant Name + Capitation Date sync.

Care Plan Sync validation shall not be assigned a new standalone Dashboard Quality section. It belongs inside Dashboard Audit and Framework Health Check.

11.4 Demo P Processing Standard

Demo P processing follows copy-first, process-once, write-once architecture.

Processing Step	v2.0 Standard
Copy	Copy active Raw Data rows
Process	Process in memory
Primary PMR	Do not assign or verify Primary PMR
Write	Single consolidated write
Tracking	Populate Demo P Update Status, Update Month, Source Sheet

12. Banner Processing Rules

The v2.0 correction is that monthly Banner formatting shall use the faster current production production formatting process where approved, rather than the slower Banner-pattern conversion that was tested during stabilization. Template creation remains governed by Template First Formatting, but monthly Banner processing must prioritize data movement over repeated formatting.

12.1 Banner Source Fields

Source FieldSource Field	SourceSource	Processing RuleProcessing Rule
Last Name	Banners / Raw Data	Used for identity support and report context.
First Name	Banners / Raw Data	Used for identity support and report context.
Participant PMR#	Banners / Raw Data	Primary participant match key for Banner synchronization.
Safety - 2 Person	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Wanderer	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Interpreter Needed	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Fall Risk	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
DPOA or Guardian Active	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Palliative Care	Banners	Banner flag synchronized to Raw Data Primary PMR Row.

12.2 Banner Synchronization Rules

RuleRule	v2.0 Standard
Raw Data Banner Fields	Raw Data receives Banner values by Sync from Banners after Banner processing.
Master List Banner Fields	Copies from Demo P
Banner Summary	Banner Summary is script-built in Demo P Process and must summarize relevant Banner flags on the Primary PMR Row.
Primary PMR Target	No Banner value shall be written to a non-primary Master List row.
Header Dependency	Banner synchronization depends on governed headers and is validated by Template Header Audit rather than repeated full header verification inside Banner processing.
Monthly Formatting	Monthly Banner processing shall use the faster current production formatting logic where approved.

12.3 Banner Processing Performance Standard

- Do not rebuild Banner formatting during normal monthly processing unless explicitly requested.
- Use verified templates for formatting authority.

- Avoid repeated setColumnWidths(), setBackgrounds(), setFontSizes(), and full-format verification passes.
- Retain Banner business logic and replace only performance bottlenecks or obsolete formatting paths.

13. Care Plan Processing Rules

Care Plan fields must be written to the Master List Primary PMR Row only. Care Plan synchronization must be validated inside Dashboard Quality Section F - Dashboard Audit and Section G - Framework Health Check.

13.1 Care Plan Source Fields

Report	Source Fields	Purpose
CP Due Date	Participant Name; Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type	Provides Care Plan Due synchronization fields.
Unlock CP	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date	Provides Unlocked CP synchronization fields.

13.2 Required Care Plan Synchronization Order

Step	Synchronization	Match Rule	Fields Synced	Target
1	Unlocked CP Sync	Unlocked CP PMR # matches Master List Participant PMR#.	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date.	Master List Primary PMR Row only.
2	Care Plan Due Sync	Care Plan Due Participant Name + Enrollment Date matches Master List Participant Name + Capitation Date.	Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type.	Master List Primary PMR Row only.

13.3 Care Plan Source Fields

Source Field	Source	Processing Rule
PMR #/ Participant PMR#.	Unlocked CP / Master List	Used for identity support and report context.
Participant Name	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
IDT Meeting Date	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
Care Plan Start Date	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
Participant Name	CP Due Date / Master List	Used for identity support and report context.
Enrollment Date / Capitation Date.	CP Due Date / Master List	Used for identity support and report context.
Last Care Plan	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.

Next Care Plan Due	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.
CP Type	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.

13.3 Care Plan Sync Validation

Validation AreaValidation Area	Dashboard Quality LocationDashboard Quality Location	Required ResultRequired Result
Unlocked CP Matches	Section F - Test 10 Dashboard Audit	Report matched, unmatched, and missing key counts.
Care Plan Due Matches	Section F - Test 10 Dashboard Audit	Report matched, unmatched, and missing key counts.
Unlocked CP Health	Section G - Framework Health Check	Pass/fail summary for Unlocked CP synchronization readiness.
Care Plan Due Health	Section G - Framework Health Check	Pass/fail summary for Care Plan Due synchronization readiness.
Rows Missing CP Data	Sections F and G	Identify rows missing IDT Meeting Date, Care Plan Start Date, Next Care Plan Due, or CP Type where applicable.

Care Plan Sync validation shall not be created as a separate Dashboard Quality section. It is an audit/health result inside existing Sections F and G.

13.4 Care Plan Formatting and Template Rules

SheetSheet	Template / Formatting StandardTemplate / Formatting Standard
CP Due Date	Monthly formatting uses the faster current production production process where approved. Template creation uses corrected template steps.
Unlock CP	Monthly formatting uses the faster current production production process where approved. Apply Full Template Formatting remains allowed for the Unlocked Care Plan template path.

- Care Plan Due and Unlocked CP sheets use the standard title/header/data layout.
- Formatting verification shall not run during normal monthly processing.
- Template Header Audit validates required Care Plan headers centrally.
- Care Plan source sheets must not be destructively altered except by approved formatting workflow.

14. Demo P Processing Rules

Demo P remains the primary monthly participant processing sheet. In v2.0 , Demo P processing is corrected to copy active Raw Data rows first, process once, and write once. Primary PMR ownership is not assigned or verified in Demo P because it is assigned in Raw Data and copied to Demo P.

Demo P must preserve required source information for processing and auditability while generating the governed Demo P update tracking columns.

14.1 Demo P Required Architecture

RuleRule	v2.0 Standardv2.0 Standard
Primary Source	Raw Data is the authoritative monthly import source.
Copy First	Demo P must copy active Raw Data rows before performing Demo P processing.

Process Once	Demo P applies required process fields in a single consolidated pass whenever practical.
Write Once	Demo P should use consolidated writes instead of repeated row-by-row writes.
Primary PMR Ownership	Demo P shall not assign, verify, or rescan Primary PMR Row ownership.
Banner Memory Sync	Not apart of Demo P processing
Disenrolled PMR Exclusion Set	Demo P may use the Disenrolled PMR set to exclude disenrolled PMRs from active Demo P output where approved by workflow.
Final Row Height	Demo P shall enforce row height 25 after processing.

14.2 Demo P Required Columns

Required Column	Source	Rule
Primary PMR Row	Copied from Raw Data	Authoritative ownership marker. Not reassigned in Demo P.
Demo P Update Status	Process	Required template/header column populated by Demo P processing.
Demo P Update Month	Process	Required template/header column populated with current processing month.
Demo P Source Sheet	Process	Required template/header column populated with Raw Data source sheet name.

The Demo P template must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet. These columns are governed by the Template Header Audit.

14.3 Demo P Banner Relationship

Area	v2.0 Standard
Banner Fields	Not a part of Demo P processing - copies from Raw Data
Banner Memory Sync Removal	Not a part of Demo P processing - copies from Raw Data
Banner Summary	Banner Summary is generated by script logic and belongs on the Primary PMR Row downstream.

14.4 Demo P Processing Removals

Removed / Prohibited Step	Replacement Standard
Demo P Working Source - assign Primary PMR Row by sequential block scan	Primary PMR Row is assigned in Raw Data and copied to Demo P.
Demo P Working Source - verify Primary PMR Row from Raw Data	No verification step required in Demo P; Template Header Audit validates the column exists.
Demo P Working Source - sync newest Banners mm.yy source into memory	Not a part of Demo P processing - copies from Raw Data
Repeated Demo P participant scans	Use copy-first/process-once/write-once architecture.

14.5 Demo P Update Tracking Standard

Header	Required Meaning	Validation
--------	------------------	------------

Demo P Update Status	Indicates processing/update status for the Demo P row.	Template Header Audit; optional Dashboard Audit summary.
Demo P Update Month	Stores current report month in mm.yy format.	Template Header Audit; optional Dashboard Audit summary.
Demo P Source Sheet	Stores the Raw Data source sheet name.	Template Header Audit; optional Dashboard Audit summary.

14.6 Demo P Processing Workflow Summary

Processing Step	Current v2.0 Standard
Copy	Copy active Raw Data rows
Process	Perform governed processing
Banner	Use Banner values from Raw Data
Primary PMR	Do not assign or verify ownership
Write	Single consolidated write
Format	Apply governed formatting

15. Disenrollment Processing Rules

Disenrollment processing is now a standalone governed workflow. The framework shall maintain a Disenrolled Exclusion List, but the Repair Disenrolled List workflow and menu item are retired.

Disenrolled participants may remain in RTZ/Demo P source data but should be excluded from inappropriate non-disenrollment monthly changes where approved by workflow. The Disenrolled Exclusion List and Master List Change Log remain system sheets and may be hidden by default.

15.1 Standalone Disenrolled Workflow

Rule	v2.0 Standard
Workflow Name	Create Disenrolled List.
Prompt	Create Disenrolled List prompts for the reporting month/date and uses that prompted value for the output sheet name.
Output Naming	Disenrolled MM.YY.
Source	Raw Data for the prompted month unless otherwise approved by production workflow.
PMR Use	Disenrolled PMR sets may be used by Demo P processing to exclude disenrolled PMRs from active output where approved.
Template	Disenrolled Exclusion List uses its governed template and approved reduced column set.
Final Row Count	Disenrolled template row count standard is 800.
Final Row Height	Disenrolled output enforces row height 25 after processing.

15.2 Disenrolled Validation Standard

Validation	Required Behavior
Template Header Audit	Validates only the approved Disenrolled column set, not removed columns.
Dashboard Count	Disenrolled output row count must align with dashboard template row count standard unless source data requires fewer used rows.
Date Prompt Naming	Output sheet name must use the month/date from the prompt.
No Repair Menu	Repair Disenrolled List shall not appear in menus or framework dispatchers.

16. Framework Development Standards

The Framework Development Standards remain protected. The framework shall be evolved from the current production script and shall not be rebuilt from memory. The Current Approved Production Script v1.6.74 is the implementation authority for future framework development.

Development Rule	v2.0 Standard
Production source	Use Current Approved Production Script v1.6.74 as the current executable baseline.
Governing specification	Use Framework Specification v2.0 as the governing authority after final assembly.
Historical references	Document only the current production framework. Historical architecture, migration history, lineage discussions, and retired production references are not part of the governing specification.
Review requirement	Always inspect the full script before modifying.
Full replacement requirement	Full replacement scripts only unless explicitly requested.
Patch prohibition	No patch snippets for production releases.
Code cleanup	Remove obsolete, deprecated, duplicate, orphaned, unused, and dead code.
Working logic preservation	Keep working business logic unchanged unless specifically requested or required by approved architecture.
Single-file architecture	Maintain clean single-file section architecture until production stabilization is complete.
Menu cleanup	Remove retired menu items such as Repair Disenrolled List when retired by specification.
Dashboard Quality	Use consolidated Dashboard Quality sections A-J rather than standalone QA report sheets.

16.1 Architecture Rules

Rule	Requirement
Review full script before changes	Required before every production script update.
No patch updates	Production releases must be full replacement versions.
Full replacement updates	Replace affected functions completely.
Remove obsolete logic	Required during every production release.
Remove duplicate logic	Required during every production release.
Remove orphan code	Required during every production release.
Remove dead code	Required during every production release.
Remove deprecated helpers	Required during every production release.
Build for long-term maintenance	No layered temporary fixes or hidden legacy logic.
Preserve approved business logic	Do not rebuild Monthly Change, Master List, Contact, Banner, Care Plan, or Demo P logic unless correcting approved bottlenecks or architecture defects.

16.2 Code Cleanup Requirements

Review Area	Required Action
-------------	-----------------

Duplicate function review	Identify and remove duplicate implementations.
Duplicate constant review	Remove duplicate or obsolete global constants.
Duplicate menu review	Remove duplicate and retired menu items.
Unused helper review	Remove helpers that are not referenced by active workflow, audit, QA, menu, or framework functions.
Orphan function review	Remove functions not called by menu, workflow, validation, QA test, framework dashboard, or active helper chain.
Dead code review	Remove unreachable code paths.
Legacy code review	Remove legacy commented-out code and backup functions.

16.3 Update Rules

Update Step	Requirement
Review entire script	Required before change.
Determine impacted functions	Identify all upstream/downstream dependencies.
Replace affected functions completely	Do not layer patches.
Verify references	Verify helper, menu, trigger, dashboard, validation, QA, and timing references.
Verify menus	Confirm no retired menu item remains.
Verify triggers	Confirm no broken trigger references.
Verify helpers	Confirm helpers exist exactly once.
Update version	Increment version, release notes, and change log.

16.D Single File Architecture Standard

Purpose

The Master List Framework shall use a single production script during active development. This architecture minimizes version-control issues, simplifies deployment, reduces upload complexity, and ensures all framework components remain synchronized during rapid development.

Development Standard

- Do not split the framework into multiple Google Apps Script (.gs) files during active development.
- Do not recommend modular architecture during production stabilization.
- All framework components shall remain within a single production script until Dashboard, template, Primary PMR, Monthly Change, validation, Dashboard Quality, timing, and QA architecture are finalized.
- After a stable production release, modularization may be reviewed, but it is not the current approved architecture.

Required Script Sections

Script Section	Required
CONFIGURATION	Yes
MENU FUNCTIONS	Yes
DASHBOARD FUNCTIONS	Yes
TEMPLATE FUNCTIONS	Yes
FORMATTERS	Yes
SYNC FUNCTIONS	Yes

MONTHLY CHANGE FUNCTIONS	Yes
MASTER LIST FUNCTIONS	Yes
DISENROLLMENT FUNCTIONS	Yes
VALIDATION FUNCTIONS	Yes
FRAMEWORK TEST FUNCTIONS	Yes
DASHBOARD QUALITY FUNCTIONS	Yes
FRAMEWORK DASHBOARD FUNCTIONS	Yes where retained by production script
TIMING FUNCTIONS	Yes
HELPER FUNCTIONS	Yes

Section Header Standard

Each major section shall use standardized section headers. Example:

```
// =====
// CONFIGURATION
// =====
```

Deployment Standard

Release Package Item	Required
Version Number	Yes
Change Summary	Yes
Removed Code Summary	Yes
Helper Audit Summary	Yes
Framework Health Check Summary	Yes
Testing Checklist	Yes
Performance Impact Review	Yes
Full Replacement Script	Yes

Future Migration Standard

When the framework reaches a stable production state, logical sections may be migrated into separate files only after governance approval. Any future modular architecture must preserve Framework Dashboard/Dashboard Quality, Framework Tests, Validation Framework, Timing Framework, Primary PMR Row Architecture, One Pass Processing Architecture, and Dashboard Configuration Standards.

Protected Standard

The Single File Architecture is a protected framework standard and shall not be modified without explicit approval.

16.E Script Rebuild Standard

Purpose

The Master List Framework shall use complete replacement updates during development and production releases.

Rebuild Rules

Rule	Requirement
Patch-style fixes	Not permitted for production releases.

Partial production replacements	Not permitted unless explicitly requested.
Obsolete logic	Remove.
Duplicate logic	Remove.
Deprecated logic	Remove.
Unused helpers	Remove.
Dead code	Remove.
Orphan functions	Remove.
Commented-out legacy code	Remove.
Backup functions	Remove.
Unused variables/constants	Remove.

Update Rules

Verification Area	Required
Entire script reviewed	Yes
Impacted functions identified	Yes
Affected functions completely replaced	Yes
Helper references verified	Yes
Menu references verified	Yes
Trigger references verified	Yes
Dashboard references verified	Yes
Validation references verified	Yes
Dashboard Quality references verified	Yes
Timing references verified	Yes

Maintenance Standard

- Build for long-term maintainability.
- Avoid technical debt.
- Avoid temporary workarounds.
- Keep working sections unchanged unless specifically requested.
- All production releases shall be delivered as full replacement versions.

16.F Production Update Standard

Purpose

The Production Update Standard mandates rigorous end-to-end review for all future enhancements. Isolated patches and fragmented modifications are prohibited in favor of complete affected-function replacement and comprehensive audit.

Production Update Requirements

Audit / Review	Required
Full production script inspection	Yes
Validation against Framework Specification v2.0	Yes
Operational workflow assessment	Yes
Shared helper dependency verification	Yes

Custom menu integration verification	Yes
Dashboard configuration/reference evaluation	Yes
Dashboard Quality section/reference evaluation	Yes
Performance timing and execution dependency review	Yes
Internal validation rules and logic tree audit	Yes
Framework testing regression analysis	Yes

Required Release Deliverables

Deliverable	Required
Architecture Audit	Yes
Helper Audit	Yes
Dependency Audit	Yes
Performance Audit	Yes
Removed Code Summary	Yes
Change Summary	Yes
Testing Recommendations	Yes
Framework Health Check Summary	Yes
Recommended Next Version	Yes
Full Replacement Script	Yes

Framework Integrity Standard

Architecture Standard	Must Preserve
Single File Code Architecture	Yes
Primary PMR Row Data Architecture	Yes
One Pass Processing Methodology	Yes
Dashboard-Driven Formatting Logic	Yes
Standardized Template Architecture	Yes
Dashboard Quality Consolidated Reporting	Yes
Centralized Validation Framework	Yes
Template Header Audit	Yes
Standardized QA Testing Architecture	Yes
Timing Framework	Yes

The Production Update Standard is a protected framework protocol. Modifications, bypasses, or deletions of these requirements are prohibited without explicit governance approval.

16.G Editorial Governance Update (v2.0)

The framework specification is an editorial document describing the implementation in the Current Approved Production Script v1.6.74. Future revisions shall edit the existing specification, preserve structure and technical depth where accurate, remove obsolete historical architecture, and document only the current production framework.

17. Helper Audit Standards

Purpose

The Helper Audit ensures that all shared helper functions required by the Master List Framework exist, are referenced correctly, and are maintained in a clean, dependency-safe state.

Helper Audit Requirement

Audit Item	Pass Requirement
All referenced helper functions exist	Pass required
No duplicate helper functions exist	Pass required
No orphan helper functions exist	Pass required
No unused helper functions exist	Pass required
No deprecated helper functions remain	Pass required
No helper references are broken	Pass required

Helper Management Rules

- All shared helper functions shall exist exactly once within the production script.
- Helper functions shall be maintained in the HELPER FUNCTIONS section of the framework.
- If a helper function is redesigned, the previous implementation shall be removed.
- Only one active implementation of a helper function may exist within the framework.

Approved Helper Reference Areas

Reference Area	May Reference Helpers
Menu Functions	Yes
Dashboard Functions	Yes
Template Functions	Yes
Formatters	Yes
Sync Functions	Yes
Monthly Change Functions	Yes
Master List Functions	Yes
Disenrollment Functions	Yes
Validation Functions	Yes
Framework Test Functions	Yes
Dashboard Quality Functions	Yes
Timing Functions	Yes
Other approved helper functions	Yes

Common Framework Helpers

Helper	Purpose / Standard
toBool_	Boolean normalization.
truthy_	Truthy value normalization.
toNumber_	Numeric normalization.
normalizeHeader_	Header normalization.
normalizeAlignment_	Alignment normalization.

normalizeText_	Text normalization.
normalizeKey_	Key normalization.
compareValues_	Value comparison.
getWrapStrategy_	Wrap strategy normalization.
safeColor_	Color fallback/validation.
safeSheetName_	Safe sheet name generation.

Additional helpers may be added as the framework evolves, but duplicate helper implementations are not allowed.

18. Framework Health Check Standards

Purpose

The Framework Health Check verifies that all critical framework components exist, are functioning correctly, and are ready for production use. It serves as the final framework readiness review prior to release.

Framework Health Check Requirement

- A Framework Health Check shall be completed before every production release.
- A release shall not be considered production-ready until all Framework Health Check items pass.
- Framework Health Check output belongs in Dashboard Quality Section G.
- Framework Health Check shall update Section G only and shall not erase or rebuild the full Dashboard Quality Report.

Framework Component Verification

Component Category	Required Verification
MENU FUNCTIONS	Exist and referenced correctly.
DASHBOARD FUNCTIONS	Exist and referenced correctly.
TEMPLATE FUNCTIONS	Exist and referenced correctly.
FORMATTER FUNCTIONS	Exist and referenced correctly.
SYNC FUNCTIONS	Exist and referenced correctly.
MONTHLY CHANGE FUNCTIONS	Exist and referenced correctly.
MASTER LIST FUNCTIONS	Exist and referenced correctly.
DISENROLLMENT FUNCTIONS	Create Disenrolled exists; Repair Disenrolled retired/absent.
VALIDATION FUNCTIONS	Exist and referenced correctly.
FRAMEWORK TEST FUNCTIONS	Exist and referenced correctly.
DASHBOARD QUALITY FUNCTIONS	Exist and section assignments A-J are valid.
TIMING FUNCTIONS	Exist and write to the current timing log.
HELPER FUNCTIONS	Exist and no broken references.

Reference Verification

Reference Type	Requirement
Menu references	All menu references exist; retired triggers removed.
Helper references	All helper references exist.
Dashboard references	All dashboard references exist.
Dashboard Quality references	All section references exist and map to A-J.

Validation references	All validation references exist.
Framework references	All framework references exist.
Timing references	All timing references exist.
Trigger references	All trigger references exist or retired triggers are removed.

ReferenceError Standard

No ReferenceErrors are permitted in production releases. Missing helpers, validation functions, framework functions, dashboard functions, timing functions, menu functions, or Dashboard Quality functions block release.

Protected Framework Components

Protected Component	Required
Framework Dashboard / Dashboard Quality	Yes
Dashboard Validation	Yes
Template Validation	Yes
Template Header Audit	Yes
Helper Audit	Yes
Dependency Audit	Yes
Orphan Function Audit	Yes
Duplicate Function Audit	Yes
Framework Health Check	Yes
Timing Logs	Yes
Care Plan Sync Validation	Yes, inside Dashboard Audit and Framework Health Check.

Pass Criteria

Criterion	Pass Requirement
No missing functions	Pass required
No missing helpers	Pass required
No missing references	Pass required
No ReferenceErrors	Pass required
No missing framework components	Pass required
No missing validation components	Pass required
No missing dashboard components	Pass required
No missing Dashboard Quality components	Pass required
No missing timing components	Pass required
Care Plan Sync validation result	Must be present in Sections F and G.

Framework Health Check is a mandatory release gate. Production releases shall not be issued until all Framework Health Check items pass successfully.

19. Testing Workflow Standards

Purpose

The Testing Workflow ensures that all framework components operate correctly before release and that production updates do not introduce regressions, missing dependencies, missing Dashboard Quality sections, or ReferenceErrors.

Testing Requirement

- Testing shall be performed before every production release.
- Testing shall be recommended after every framework update.
- All production releases shall complete the required testing workflow.
- Dashboard Quality Report is the consolidated testing output.

Dashboard Quality Section Test Matrix

Section	Test / Output	Purpose	Standalone Report Sheet
A	Template Validation	Validate templates and template configuration.	Retired; writes to Section A.
B	Template Header Audit	Validate governed headers across templates.	New consolidated section.
C	Test 6 Date Formatting	Validate date formatting.	Retired; writes to Section C.
D	Test 7 Validation Failure	Validate/report framework validation failures.	Retired; writes to Section D.
E	Test 9 Monthly Change Subheaders	Validate Monthly Change sections/subheaders.	Retired; writes to Section E.
F	Test 10 Dashboard Audit	Validate dashboard and include CP Sync audit.	Retired; writes to Section F.
G	Framework Health Check	Validate release readiness and include CP Sync health.	Retired as standalone report; writes to Section G.
H	Signoff	Release readiness/signoff output.	Consolidated.
I	Summary	Consolidated QA summary.	Consolidated.
J	Timing Summary	Timing summary from current timing log.	Consolidated.

Testing Categories

Category	Required in v2.0
Dashboard Integrity Test	Yes; output in Dashboard Audit section.
Template Validation	Yes; output in Section A.
Template Header Audit	Yes; output in Section B.
Fast Structure Validation	Yes where retained; may be included in Template Validation or Dashboard Audit.
Format Preview	Optional/QA as needed; not part of monthly processing.
Framework Dashboard / Dashboard Quality	Yes; consolidated output required.
Helper Audit	Yes.
Dependency Audit	Yes.

Orphan Function Audit	Yes.
Duplicate Function Audit	Yes.
Framework Health Check	Yes; output in Section G.
Care Plan Sync Validation	Yes; output in Sections F and G.

Retired Testing Outputs

Retired Output / Behavior	Replacement
Standalone Template Validation Report	Dashboard Quality Section A.
Standalone Test 6 Date Format Report	Dashboard Quality Section C.
Standalone Test 7 Validation Failure Report	Dashboard Quality Section D.
Standalone Test 9 Monthly Change Subheader Report	Dashboard Quality Section E.
Standalone Test 10 Dashboard Audit Report	Dashboard Quality Section F.
Standalone Framework Health Check Report	Dashboard Quality Section G.
Dashboard Quality hidden-template creation	Direct section updates on existing Dashboard Quality Report.
Dashboard Quality full rebuild after all tests	Section I Summary and Section J Timing Summary update only.

19.1 Editorial Update (v2.0)

Testing documentation shall describe the current production implementation only. Historical workflows, retired report architectures, and legacy testing processes shall not be retained unless required for current production behavior.

21. Versioning Standards

Text file names for scripts must always start with v. Versioning standards ensure consistent release tracking, framework governance, testing accountability, and change management throughout the life of the Master List Framework.

Release Type	Format	Use
Major	X.0.0	Major architecture or workflow redesign.
Feature	X.X.0	New functionality, reports, dashboard capabilities.
Bug Fix	X.X.X	Bug fixes, validation fixes, minor improvements.
Population Pass	X.X.X Label	Documentation migration or specification completion pass.

Current v2.0 Production Baseline Standard

Item	Standard
Current production script baseline	v1.6.74
Framework specification target	v2.0
Current implementation authority	Current Approved Production Script v1.6.74

Version Update Requirement

Requirement	Required
-------------	----------

Increment version number	Yes
Update version header	Yes
Update release documentation	Yes
Update changelog	Yes
Update known issues / open items	Yes when applicable

Release Documentation Requirement

Release Document Item	Required
Version Number	Yes
Release Date	Yes
Change Summary	Yes
Removed Code Summary	Yes
Helper Audit Summary	Yes
Framework Health Check Summary	Yes
Testing Checklist	Yes
Performance Review Summary	Yes
Known Issues	Yes
Recommended Next Version	Yes

Version History Standard

The framework shall maintain a version history identifying version, release date, summary, major changes, known issues, and status. Version history shall remain part of the framework documentation.

21.1 Framework Update Governance

All approved framework decisions shall be incorporated into the next governing specification revision. Framework updates shall be cumulative.

Approved governance decisions shall not require recreation from historical specifications once incorporated into the current governing document.

The current governing specification shall be treated as the authoritative framework baseline.

When approved framework decisions affect:

- Architecture
- Processing Logic
- Dashboard Configuration
- Validation Rules
- Template Definitions
- Column Definitions
- Sheet Definitions
- Data Source Mappings
- Synchronization Logic

the governing specification and affected appendices shall be updated accordingly.

21.2 Latest Approved Output Governance

The current governing framework baseline shall be established by:

- Current Governing Specification
- Current Production Baseline

- Approved framework artifacts include:
- Framework Specification Documents
- Official Framework Updates
- Framework Addendum Records
- Active Production Scripts
- Formal Architecture Audits
- System Validation Reports
- Performance Timing Reports
- Authorized Data Mapping Updates

When newer approved artifacts are issued:

- Review against the current governing specification.
- Review against the current production baseline.
- Identify governance impacts.
- Identify architecture impacts.

Identify required specification updates.

Supporting artifacts shall not supersede the governing specification or approved production baseline unless formally approved.

The Master List Framework shall evolve through cumulative governance updates.

21.3 Script Lineage Governance

The framework maintains a strict hierarchical lineage:

- Current Governing Specification
- Current Production Baseline
- Current Approved Production Script
- Current Approved Framework Update

Future development recommendations shall be derived from the newest approved level available.

When a newer approved production script exists:

- Compare against the current production baseline.
- Compare against the governing specification.
- Identify architecture deltas.
- Update future recommendations to align with the newest approved script.

Regression to prior executable versions is prohibited except when explicitly required for regression review or historical audit.

Archived reference scripts do not govern the current framework.

21.4 Executable Script Accessibility Governance

The framework mandates the absolute availability of the latest authorized production script in its entirety prior to any modification, architectural optimization, formal audit, logical reconstruction, or version advancement activities.

Validated repositories for executable logic comprise:

- Internal Knowledge Base Repository Files
- Current Authorized Production Script Uploads
- Verified Production Script Archival Lineage
- Exhaustive Script Attachments within Active Sessions

In instances where the definitive production baseline is inaccessible, fragmented, or only partially transparent:

- Prohibit the assumption of internal logic.
- Forbid memory-based logical code reconstruction.
- Avoid inaccurate declarations of comprehensive audit.
- Demand the delivery of exhaustive source files.

Conceptual framework governance reviews remain permissible absent the executable file.

Technical script modifications necessitate total source transparency and availability.

The most recently authorized complete version serves as the definitive executable implementation baseline.

21.5 Knowledge Base Governance

Purpose

The Master List GPT Knowledge Base establishes a formal authority hierarchy and file organization standard to ensure framework integrity and documentation consistency.

Knowledge Base Index

A centralized Knowledge Base Index shall be maintained as the authoritative log. This index must be updated whenever governing framework artifacts, production baselines, executable scripts, update logs, validation reports, timing summaries, mapping documents, or historical lineage files are added, replaced, retired, or renamed.

Knowledge Authority Order

Tier 1 – Governing Authority

- Current Framework Specification
- Current Daily Framework Review Protocol
- Current GPT Instructions

Tier 2 – Active Production Authority

- Current Production Baseline
- Current Approved Production Script

Tier 3 – Active Supporting Artifacts

- Dashboard Quality Reports
- Validation Reports
- Timing Reports
- Mapping Documents
- Framework Update Log

Protected Component	v2.0 Status
Framework Dashboard / Dashboard Quality	Protected; Dashboard Quality sections A-J are the consolidated QA output.
Framework QA Tests	Protected.
Template Validation	Protected; writes Section A.
Template Header Audit	Protected; writes Section B.
Dashboard Validation	Protected.
Helper Audit	Protected.
Dependency Audit	Protected.
Orphan Function Audit	Protected.
Duplicate Function Audit	Protected.

Framework Health Check	Protected; writes Section G.
Timing Logs	Protected; summarized in Section J.
Dashboard Configuration	Protected.
Care Plan Sync Validation	Protected; included in Sections F and G.

Protected Behavior	Standard
Freeze Rows 1-4	Protected.
Freeze Columns A:B	Protected.
Header Row 4	Protected.
Data Start Row 5	Protected.

Appendix B - Sheet Definitions

Sheet	Purpose	Primary Sources	Processing/Rules
Imported Data	Authoritative monthly import source and Primary PMR ownership source.	Monthly imported data.	Preserve source data. Assign Primary PMR Row here only. Add approved framework-owned columns only.

Sheet	Purpose	Primary Sources	Processing/Rules
Master List	Primary operational participant repository.	Demo P; Banner; CP Due Date; Unlock CP.	Primary operational repository. Synchronize process outputs to Primary PMR Row only. No direct monthly imports.
Demo P	Monthly participant processing and comparison sheet.	Copy of active Raw Data plus Banner synchronization and process-generated fields.	Copy active participants. Process once. Generate comparison results. Populate Demo P tracking fields. Does not assign Primary PMR ownership.
Banners	Banner flags source.	Banner report import.	Import monthly banner data. Synchronize banner values to Demo P and Master List Primary PMR Row.
CP Due Date	Care plan due dates source.	Care Plan Due report import.	Import care plan due data. Synchronize Enrollment Date, Last Care Plan, Next Care Plan Due, and CP Type to Master List.
Unlock CP	Unlocked care plan source.	Unlocked Care Plan report import.	Import unlocked care plan data. Synchronize PMR-based care plan fields to Master List.
Monthly Change	Monthly audit/report output.	Generated by framework processing.	Generate change audit grouped by change type. Primary PMR Row changes only.
Disenrolled Exclusion List	Standalone disenrollment tracker/exclusion source.	Imported data and framework processing.	Generate monthly exclusion list. No repair processing.
Master List Change Log	Audit/change log.	Generated by framework.	Hidden audit log of framework actions.
Format Dashboard	Formatting and framework control center.	Manual configuration.	Controls formatting, templates, validation, timing, and dashboard-driven behavior.
Dashboard Quality Report	Authoritative consolidated QA report.	Framework validation and dashboard audits.	Generate consolidated quality report by section with timestamps.
Timing Report	Performance log.	Framework timing capture.	Record processing duration by step and total execution time.

Global formatting standard is defined by the Format Dashboard. Appendix A documents only column attributes that differ from the global standard. Columns not listed here inherit the default formatting.

Appendix C - Data Source Mapping Tables

v2.0 Final Governing Edition

Authority: Current Approved Production Script v1.6.74 and Format Dashboard v1.6.75.

Purpose: This appendix is the human-readable governing reference for production sheet headers, column order, data sources, and processing rules. Format Dashboard SECTION F remains the authoritative implementation source.

Terminology: Raw Data identifies the formatted Raw Data worksheet. Unformatted Data identifies the imported monthly participant dataset before formatting. Framework process identifies generated, synchronized, compared, or audited values.

Appendix C.1 - Demo P Mapping

Demo P is created from Raw Data and enriched in one pass. Columns 1-46 copy participant data, columns 47-52 carry banner values synchronized into Raw Data, and columns 53-80 are generated by Demo P processing.

Column Order	Destination Header	Source of Data	Processing Rule
1	Last Name	Raw Data	Copy governed Raw Data value.
2	First Name	Raw Data	Copy governed Raw Data value.
3	Preferred Name	Raw Data	Copy governed Raw Data value.
4	Date of Birth	Raw Data	Copy governed Raw Data value.
5	Participant PMR#	Raw Data	Copy governed Raw Data value.
6	Phone Number	Raw Data	Copy governed Raw Data value.
7	Address Line 1	Raw Data	Copy governed Raw Data value.
8	Address Line 2	Raw Data	Copy governed Raw Data value.
9	City	Raw Data	Copy governed Raw Data value.
10	State	Raw Data	Copy governed Raw Data value.
11	Zip	Raw Data	Copy governed Raw Data value.
12	Oxygen	Raw Data	Copy governed Raw Data value.
13	Primary Language	Raw Data	Copy governed Raw Data value.
14	Residence Type	Raw Data	Copy governed Raw Data value.
15	Contact - Last Name	Raw Data	Copy governed Raw Data value.
16	Contact - First Name	Raw Data	Copy governed Raw Data value.
17	Type of Contact	Raw Data	Copy governed Raw Data value.
18	Contact - Primary Language	Raw Data	Copy governed Raw Data value.
19	Relationship	Raw Data	Copy governed Raw Data value.
20	AD1 - Phone	Raw Data	Copy governed Raw Data value.
21	AD1 - Phone Valid Dates From	Raw Data	Copy governed Raw Data value.

Column Order	Destination Header	Source of Data	Processing Rule
22	AD1 - Phone Valid Dates To	Raw Data	Copy governed Raw Data value.
23	AD2 - Phone	Raw Data	Copy governed Raw Data value.
24	AD2 - Phone Valid Dates From	Raw Data	Copy governed Raw Data value.
25	AD2 - Phone Valid Dates To	Raw Data	Copy governed Raw Data value.
26	AD3 - Phone	Raw Data	Copy governed Raw Data value.
27	AD3 - Phone Valid Dates From	Raw Data	Copy governed Raw Data value.
28	AD3 - Phone Valid Dates To	Raw Data	Copy governed Raw Data value.
29	Company	Raw Data	Copy governed Raw Data value.
30	Contact - Notes	Raw Data	Copy governed Raw Data value.
31	Capitation Date	Raw Data	Copy governed Raw Data value.
32	Enrollment Status	Raw Data	Copy governed Raw Data value.
33	Disenrollment Date	Raw Data	Copy governed Raw Data value.
34	Disenrollment Effective Date	Raw Data	Copy governed Raw Data value.
35	Disenrollment Reason	Raw Data	Copy governed Raw Data value.
36	Date of Death	Raw Data	Copy governed Raw Data value.
37	Caseload - Social Work	Raw Data	Copy governed Raw Data value.
38	Caseload - RN	Raw Data	Copy governed Raw Data value.
39	Caseload - PCP	Raw Data	Copy governed Raw Data value.
40	Caseload - HCC	Raw Data	Copy governed Raw Data value.
41	Caseload - Activities	Raw Data	Copy governed Raw Data value.
42	Caseload - OT	Raw Data	Copy governed Raw Data value.
43	Caseload - PT	Raw Data	Copy governed Raw Data value.
44	Caseload - RD	Raw Data	Copy governed Raw Data value.
45	Caseload - Supervising MD	Raw Data	Copy governed Raw Data value.
46	Additional Important Information	Raw Data	Copy governed Raw Data value.
47	Safety - 2 Person	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.
48	Wanderer	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.
49	Interpreter Needed	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.

Column Order	Destination Header	Source of Data	Processing Rule
50	Fall Risk	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.
51	DPOA or Guardian Active	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.
52	Palliative Care	Raw Data (Banner synchronized)	Use banner value synchronized into Raw Data.
53	Primary PMR Row	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
54	Banner Summary	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
55	Phone 1 - Label	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
56	Phone 1 - Value	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
57	Phone 2 - Label	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
58	Phone 2 - Value	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
59	Phone 3 - Label	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
60	Phone 3 - Value	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
61	Phone 4 - Label	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
62	Phone 4 - Value	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
63	Address 1 - Street	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
64	Custom Field 1 - Label	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
65	Custom Field 1 - Value	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
66	Notes	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
67	Contact - 1	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
68	Contact - 2	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
69	Contact - 3	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
70	Contact - 4	Demo P process	Generate, derive, consolidate, or track during Demo P processing.

Column Order	Destination Header	Source of Data	Processing Rule
71	Contact - 5	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
72	Contact - 6	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
73	Contact - 7	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
74	Contact - 8	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
75	Contact - Summary	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
76	Participant Name	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
77	Name	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
78	Demo P Update Status	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
79	Demo P Update Month	Demo P process	Generate, derive, consolidate, or track during Demo P processing.
80	Demo P Source Sheet	Demo P process	Generate, derive, consolidate, or track during Demo P processing.

Appendix C.2 - Banner Mapping

The Banner Report is formatted from the imported banner source and provides participant-level banner indicators.

Column Order	Destination Header	Source of Data	Processing Rule
1	Last Name	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
2	First Name	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
3	Participant PMR#	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
4	Safety - 2 Person	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
5	Wanderer	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
6	Interpreter Needed	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
7	Fall Risk	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.
8	DPOA or Guardian Active	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.

Column Order	Destination Header	Source of Data	Processing Rule
9	Palliative Care	Primary Data	Format imported Banner Report value; synchronize by Participant PMR#.

Appendix C.3 - Care Plan Due Date Mapping

The Care Plan Due Date Report is formatted from the imported care plan due source and synchronized to the Master List Primary PMR Row.

Column Order	Destination Header	Source of Data	Processing Rule
1	Participant Name	Primary Data	Format imported Care Plan Due value for synchronization.
2	Enrollment Date	Primary Data	Format imported Care Plan Due value for synchronization.
3	Last Care Plan	Primary Data	Format imported Care Plan Due value for synchronization.
4	Next Care Plan Due	Primary Data	Format imported Care Plan Due value for synchronization.
5	CP Type	Primary Data	Format imported Care Plan Due value for synchronization.

Appendix C.4 - Unlocked Care Plan Mapping

The Unlocked Care Plan Report is formatted from the imported unlocked care plan source and synchronized to the Master List Primary PMR Row.

Column Order	Destination Header	Source of Data	Processing Rule
1	Participant Name	Primary Data	Format imported Unlocked Care Plan value for synchronization.
2	PMR #	Primary Data	Format imported Unlocked Care Plan value for synchronization.
3	IDT Meeting Date	Primary Data	Format imported Unlocked Care Plan value for synchronization.
4	Care Plan Start Date	Primary Data	Format imported Unlocked Care Plan value for synchronization.

Appendix C.5 - Care Plan Synchronization Rules

Source Sheet	Match Rule	Destination on Sheet	Target Row	Destination Columns	Processing Rule
Unlocked Care Plan Report	PMR # matches Master List Participant PMR#	Master List	Primary PMR Row only	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date	Normalize PMR and synchronize only to the matched Primary PMR Row.

Source Sheet	Match Rule	Destination Sheet	Target Row	Destination Columns	Processing Rule
Care Plan Due Date Report	Participant Name + Enrollment Date matches Master List Participant Name + Capitation Date	Master List	Primary PMR Row only	Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type	Synchronize only to the matched Primary PMR Row.

Appendix C.6 - Master List Mapping

Master List contains one operational Primary PMR Row per participant. All 37 governed columns are sourced from Demo P.

Column Order	Destination Header	Source of Data	Processing Rule
1	Participant Name	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
2	Name	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
3	Preferred Name	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
4	Date of Birth	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
5	Address 1 - Street	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
6	City	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
7	State	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
8	Zip	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
9	Phone 1 - Value	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
10	Phone 2 - Value	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
11	Participant PMR#	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.

Column Order	Destination Header	Source of Data	Processing Rule
12	Primary Language	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
13	Residence Type	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
14	Notes	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
15	IDT Meeting Date	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
16	Care Plan Start Date	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
17	Enrollment Date	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
18	Last Care Plan	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
19	Next Care Plan Due	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
20	CP Type	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
21	Completed	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
22	Face Sheet	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
23	HHA	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
24	Oxygen	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
25	Equipment	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
26	Caseload - Social Work	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.

Column Order	Destination Header	Source of Data	Processing Rule
27	Caseload - RN	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
28	Caseload - PCP	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
29	Caseload - HCC	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
30	Caseload - Activities	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
31	Caseload - OT	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
32	Caseload - PT	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
33	Caseload - RD	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
34	Caseload - Supervising MD	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
35	Capitation Date	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
36	Enrollment Status	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.
37	Primary PMR Row	Demo P	Copy from the governed Demo P Primary PMR Row; retain synchronized care plan values where applicable.

Appendix C.7 - Disenrolled Exclusion Mapping

Disenrolled Exclusion uses the governed 66-column layout. Participant values originate from Demo P; the audit column is populated by the framework.

Column Order	Destination Header	Source of Data	Processing Rule
1	Participant Name	Demo P	Copy from the matched Demo P participant record.
2	Name	Demo P	Copy from the matched Demo P participant record.

Column Order	Destination Header	Source of Data	Processing Rule
3	Preferred Name	Demo P	Copy from the matched Demo P participant record.
4	Date of Birth	Demo P	Copy from the matched Demo P participant record.
5	Address 1 - Street	Demo P	Copy from the matched Demo P participant record.
6	City	Demo P	Copy from the matched Demo P participant record.
7	State	Demo P	Copy from the matched Demo P participant record.
8	Zip	Demo P	Copy from the matched Demo P participant record.
9	Phone 1 - Value	Demo P	Copy from the matched Demo P participant record.
10	Phone 2 - Value	Demo P	Copy from the matched Demo P participant record.
11	Participant PMR#	Demo P	Copy from the matched Demo P participant record.
12	Primary Language	Demo P	Copy from the matched Demo P participant record.
13	Residence Type	Demo P	Copy from the matched Demo P participant record.
14	Notes	Demo P	Copy from the matched Demo P participant record.
15	IDT Meeting Date	Demo P	Copy from the matched Demo P participant record.
16	Care Plan Start Date	Demo P	Copy from the matched Demo P participant record.
17	Enrollment Date	Demo P	Copy from the matched Demo P participant record.
18	Last Care Plan	Demo P	Copy from the matched Demo P participant record.
19	Next Care Plan Due	Demo P	Copy from the matched Demo P participant record.
20	CP Type	Demo P	Copy from the matched Demo P participant record.
21	Oxygen	Demo P	Copy from the matched Demo P participant record.
22	Caseload - Social Work	Demo P	Copy from the matched Demo P participant record.
23	Caseload - RN	Demo P	Copy from the matched Demo P participant record.

Column Order	Destination Header	Source of Data	Processing Rule
24	Caseload - PCP	Demo P	Copy from the matched Demo P participant record.
25	Caseload - HCC	Demo P	Copy from the matched Demo P participant record.
26	Caseload - Activities	Demo P	Copy from the matched Demo P participant record.
27	Caseload - OT	Demo P	Copy from the matched Demo P participant record.
28	Caseload - PT	Demo P	Copy from the matched Demo P participant record.
29	Caseload - RD	Demo P	Copy from the matched Demo P participant record.
30	Caseload - Supervising MD	Demo P	Copy from the matched Demo P participant record.
31	Capitation Date	Demo P	Copy from the matched Demo P participant record.
32	Enrollment Status	Demo P	Copy from the matched Demo P participant record.
33	Disenrollment Date	Demo P	Copy from the matched Demo P participant record.
34	Disenrollment Effective Date	Demo P	Copy from the matched Demo P participant record.
35	Disenrollment Reason	Demo P	Copy from the matched Demo P participant record.
36	Date of Death	Demo P	Copy from the matched Demo P participant record.
37	Contact - Last Name	Demo P	Copy from the matched Demo P participant record.
38	Contact - First Name	Demo P	Copy from the matched Demo P participant record.
39	Type of Contact	Demo P	Copy from the matched Demo P participant record.
40	Contact - Primary Language	Demo P	Copy from the matched Demo P participant record.
41	Relationship	Demo P	Copy from the matched Demo P participant record.
42	AD1 - Phone	Demo P	Copy from the matched Demo P participant record.
43	AD1 - Phone Valid Dates From	Demo P	Copy from the matched Demo P participant record.
44	AD1 - Phone Valid Dates To	Demo P	Copy from the matched Demo P participant record.

Column Order	Destination Header	Source of Data	Processing Rule
45	AD2 - Phone	Demo P	Copy from the matched Demo P participant record.
46	AD2 - Phone Valid Dates From	Demo P	Copy from the matched Demo P participant record.
47	AD2 - Phone Valid Dates To	Demo P	Copy from the matched Demo P participant record.
48	AD3 - Phone	Demo P	Copy from the matched Demo P participant record.
49	AD3 - Phone Valid Dates From	Demo P	Copy from the matched Demo P participant record.
50	AD3 - Phone Valid Dates To	Demo P	Copy from the matched Demo P participant record.
51	Company	Demo P	Copy from the matched Demo P participant record.
52	Contact - Notes	Demo P	Copy from the matched Demo P participant record.

Appendix C.8 - Monthly Change Mapping

Monthly Change is generated by comparing governed monthly Raw Data datasets. Its 54 columns mirror the Raw Data governed column set.

Column Order	Destination Header	Source of Data	Processing Rule
1	Last Name	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
2	First Name	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
3	Preferred Name	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
4	Date of Birth	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
5	Participant PMR#	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
6	Phone Number	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
7	Address Line 1	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
8	Address Line 2	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
9	City	Populates via process	Compare prior and current Raw Data values and populate the governed change output.

Column Order	Destination Header	Source of Data	Processing Rule
10	State	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
11	Zip	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
12	Oxygen	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
13	Primary Language	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
14	Residence Type	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
15	Contact - Last Name	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
16	Contact - First Name	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
17	Type of Contact	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
18	Contact - Primary Language	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
19	Relationship	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
20	AD1 - Phone	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
21	AD1 - Phone Valid Dates From	Populates via process	Compare prior and current Raw Data values and

Column Order	Destination Header	Source of Data	Processing Rule
			populate the governed change output.
22	AD1 - Phone Valid Dates To	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
23	AD2 - Phone	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
24	AD2 - Phone Valid Dates From	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
25	AD2 - Phone Valid Dates To	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
26	AD3 - Phone	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
27	AD3 - Phone Valid Dates From	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
28	AD3 - Phone Valid Dates To	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
29	Company	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
30	Contact - Notes	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
31	Capitation Date	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
32	Enrollment Status	Populates via process	Compare prior and current Raw Data values and populate the governed change output.

Column Order	Destination Header	Source of Data	Processing Rule
33	Disenrollment Date	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
34	Disenrollment Effective Date	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
35	Disenrollment Reason	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
36	Date of Death	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
37	Caseload - Social Work	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
38	Caseload - RN	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
39	Caseload - PCP	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
40	Caseload - HCC	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
41	Caseload - Activities	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
42	Caseload - OT	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
43	Caseload - PT	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
44	Caseload - RD	Populates via process	Compare prior and current Raw Data values and

Column Order	Destination Header	Source of Data	Processing Rule
			populate the governed change output.
45	Caseload - Supervising MD	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
46	Additional Important Information	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
47	Notes	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
48	Safety - 2 Person	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
49	Wanderer	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
50	Interpreter Needed	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
51	Fall Risk	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
52	DPOA or Guardian Active	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
53	Palliative Care	Populates via process	Compare prior and current Raw Data values and populate the governed change output.
54	Primary PMR Row	Populates via process	Compare prior and current Raw Data values and populate the governed change output.

Appendix C.9 - Raw Data Mapping

Raw Data is the formatted monthly participant dataset. Columns 1-47 originate in the imported unformatted source, columns 48-53 synchronize from Banners, and column 54 is assigned during Raw Data formatting.

Column Order	Destination Header	Source of Data	Processing Rule
1	Last Name	Unformatted Data	Copy and normalize imported participant data.
2	First Name	Unformatted Data	Copy and normalize imported participant data.
3	Preferred Name	Unformatted Data	Copy and normalize imported participant data.
4	Date of Birth	Unformatted Data	Copy and normalize imported participant data.
5	Participant PMR#	Unformatted Data	Copy and normalize imported participant data.
6	Phone Number	Unformatted Data	Copy and normalize imported participant data.
7	Address Line 1	Unformatted Data	Copy and normalize imported participant data.
8	Address Line 2	Unformatted Data	Copy and normalize imported participant data.
9	City	Unformatted Data	Copy and normalize imported participant data.
10	State	Unformatted Data	Copy and normalize imported participant data.
11	Zip	Unformatted Data	Copy and normalize imported participant data.
12	Oxygen	Unformatted Data	Copy and normalize imported participant data.
13	Primary Language	Unformatted Data	Copy and normalize imported participant data.
14	Residence Type	Unformatted Data	Copy and normalize imported participant data.
15	Contact - Last Name	Unformatted Data	Copy and normalize imported participant data.
16	Contact - First Name	Unformatted Data	Copy and normalize imported participant data.
17	Type of Contact	Unformatted Data	Copy and normalize imported participant data.
18	Contact - Primary Language	Unformatted Data	Copy and normalize imported participant data.
19	Relationship	Unformatted Data	Copy and normalize imported participant data.

Column Order	Destination Header	Source of Data	Processing Rule
20	AD1 - Phone	Unformatted Data	Copy and normalize imported participant data.
21	AD1 - Phone Valid Dates From	Unformatted Data	Copy and normalize imported participant data.
22	AD1 - Phone Valid Dates To	Unformatted Data	Copy and normalize imported participant data.
23	AD2 - Phone	Unformatted Data	Copy and normalize imported participant data.
24	AD2 - Phone Valid Dates From	Unformatted Data	Copy and normalize imported participant data.
25	AD2 - Phone Valid Dates To	Unformatted Data	Copy and normalize imported participant data.
26	AD3 - Phone	Unformatted Data	Copy and normalize imported participant data.
27	AD3 - Phone Valid Dates From	Unformatted Data	Copy and normalize imported participant data.
28	AD3 - Phone Valid Dates To	Unformatted Data	Copy and normalize imported participant data.
29	Company	Unformatted Data	Copy and normalize imported participant data.
30	Contact - Notes	Unformatted Data	Copy and normalize imported participant data.
31	Capitation Date	Unformatted Data	Copy and normalize imported participant data.
32	Enrollment Status	Unformatted Data	Copy and normalize imported participant data.
33	Disenrollment Date	Unformatted Data	Copy and normalize imported participant data.
34	Disenrollment Effective Date	Unformatted Data	Copy and normalize imported participant data.
35	Disenrollment Reason	Unformatted Data	Copy and normalize imported participant data.
36	Date of Death	Unformatted Data	Copy and normalize imported participant data.
37	Caseload - Social Work	Unformatted Data	Copy and normalize imported participant data.
38	Caseload - RN	Unformatted Data	Copy and normalize imported participant data.
39	Caseload - PCP	Unformatted Data	Copy and normalize imported participant data.
40	Caseload - HCC	Unformatted Data	Copy and normalize imported participant data.

Column Order	Destination Header	Source of Data	Processing Rule
41	Caseload - Activities	Unformatted Data	Copy and normalize imported participant data.
42	Caseload - OT	Unformatted Data	Copy and normalize imported participant data.
43	Caseload - PT	Unformatted Data	Copy and normalize imported participant data.
44	Caseload - RD	Unformatted Data	Copy and normalize imported participant data.
45	Caseload - Supervising MD	Unformatted Data	Copy and normalize imported participant data.
46	Additional Important Information	Unformatted Data	Copy and normalize imported participant data.
47	Notes	Unformatted Data	Copy and normalize imported participant data.
48	Safety - 2 Person	Banners	Synchronize banner indicator by Participant PMR#.
49	Wanderer	Banners	Synchronize banner indicator by Participant PMR#.
50	Interpreter Needed	Banners	Synchronize banner indicator by Participant PMR#.
51	Fall Risk	Banners	Synchronize banner indicator by Participant PMR#.
52	DPOA or Guardian Active	Banners	Synchronize banner indicator by Participant PMR#.
53	Palliative Care	Banners	Synchronize banner indicator by Participant PMR#.
54	Primary PMR Row	Format Raw Data	Assign the governed Primary PMR Row indicator.

Appendix C Editorial Governance

Future changes to headers, column order, data sources, or synchronization rules must first be approved in the production framework and Format Dashboard, then incorporated into this appendix during the next governed documentation update.

Master List Framework Specification v2.0

Appendices D-I - Fully Automated Governing Edition

Authority: Current Approved Production Script v1.6.74 and the current Format Dashboard. This document replaces outdated A-J Dashboard Quality references and retired sheet references with the current production implementation.

Appendix D - Color Standards Table

Production sheet colors are governed by the Format Dashboard. The hexadecimal values below reflect the active production sheet-type defaults. System/report surfaces without a fixed production constant remain dashboard-controlled.

Sheet Type	Color	Governance
CP Due Date	#65CC99	Format Dashboard / production default
Unlock CP	#65CCC3	Format Dashboard / production default
Banners	#65A9CC	Format Dashboard / production default
Raw Data	#657FCC	Format Dashboard / production default
Demo P	#657FCC	Format Dashboard / production default
Master List	#7665CC	Format Dashboard / production default
Monthly Change	#A165CC	Format Dashboard / production default
Disenrolled Exclusion List	#CC65A1	Format Dashboard / production default
Index	Dashboard-controlled	Format Dashboard
Dashboard Quality Report	Dashboard-controlled	System surface
Framework Timing Report	Dashboard-controlled	System surface

Appendix E - Sheet Naming Table

Monthly operational sheets use the governed MM.YY suffix. System sheets do not use a monthly suffix. Retired Master List Change Log naming has been removed because it is not present in Current Approved Production Script v1.6.74.

Sheet Name / Prefix	Report Title	Example	Date Behavior
Raw Data	Raw Data	Raw Data 05.26	Monthly
Demo P	Demographics - Participants	Demo P 05.26	Monthly
Banners	Banner Report	Banners 05.26	Monthly

Sheet Name / Prefix	Report Title	Example	Date Behavior
Unlock CP	Unlocked Care Plan Report	Unlock CP 05.26	Monthly
CP Due	CP Due Date	CP Due 05.26	Monthly
Monthly Change	Monthly Change Report	Monthly Change 05.26	Monthly
Master List	Master List	Master List 05.26	Monthly
Disenrolled	Disenrolled Exclusion List	Disenrolled 05.26	Monthly
Dashboard Quality Report	Dashboard Quality Report	Dashboard Quality Report	System / no month
Framework Timing Report	Framework Timing Report	Framework Timing Report	System / no month

Appendix F - Framework Test and Dashboard Quality Definitions

Dashboard Quality Report is the consolidated framework-quality artifact. Current production uses Sections A-N. Each process writes only its assigned section or approved batch group; standalone QA report sheets remain retired.

Section	Purpose	Pass Criteria
A - Global Inputs Verification	Verify required global settings and dashboard inputs.	No missing required global input; status PASS.
B - Sheet Definitions Verification	Verify governed sheet definitions, types, titles, colors, and processing flags.	No missing or invalid sheet definitions.
C - Sheet Headers Verification	Verify governed headers and source assignments for every sheet type.	No missing, duplicated, or misordered governed headers.
D - Column Definitions Verification	Verify widths, formats, visibility, alignment, and wrap controls.	No invalid or missing governed column definitions.
E - Sheet Behavior Verification	Verify filters, freezes, cleanup rules, template behavior, and participation flags.	No missing or invalid governed behaviors.
F - Template Structure & Validation	Verify template presence, signatures, row capacity, and structural readiness.	All required templates valid and current.
G - Layout Snapshot Settings	Verify governed layout snapshot settings and structural formatting controls.	Snapshot settings present and valid.
H - Framework Health Check	Verify functions, helpers, references, dependencies, and framework readiness.	No blocking failures or ReferenceErrors.
I - Performance Summary	Summarize timing findings, bottlenecks, and performance status.	Current performance summary present.
J - Master List Validation	Validate Master List structure, Primary PMR rows, and required output integrity.	Master List validation passes.
K - Care Plan Sync Validation	Validate Unlock CP and Care Plan Due synchronization results.	Required match, unmatched, and missing-key results reported.

Section	Purpose	Pass Criteria
L - Workflow & Synchronization Verification	Verify end-to-end workflow and synchronization architecture.	Required workflows and synchronization paths pass.
M - Summary	Consolidate current framework results into overall readiness status.	Summary accurately reflects Sections A-L.
N - Signoff	Provide final release-readiness/signoff output.	Signoff status and blocking issues populated.

Appendix F.1 - Retired Standalone QA Reports

Retired Standalone Report / Behavior	Current Replacement
Template Validation Report	Dashboard Quality Section F
Template Header Audit Report	Dashboard Quality Section C
Test 6 Date Format Report	Dashboard Quality Sections C-D, as applicable
Test 7 Validation Failure Report	Relevant verification section and Section M summary
Test 9 Monthly Change Subheader Report	Dashboard Quality workflow verification
Test 10 Dashboard Audit Report	Dashboard Quality Sections A-G
Framework Health Check Report	Dashboard Quality Section H
Dashboard Quality hidden-template creation	Removed
Dashboard Quality full rebuild after each test	Removed; approved section or batch updates only

Appendix G - Release Checklist

Release Review Area	Required Checklist
Pre-Release Review	Version Number Updated; Changelog Updated; Release Notes Updated; Framework Specification v2.0 Alignment Checked; Current Approved Production Script identified.
Code Review	Syntax Review; Brace Balance; Parenthesis Balance; Bracket Balance; Full Script Review; no reconstructed or missing source code.
Reference Review	Menu; Helper; Trigger; Dashboard; Dashboard Quality A-N; Validation; Timing; Template; Synchronization references verified.
Audit Review	Framework Delta Review; Architecture Audit; Helper Audit; Dependency Audit; Orphan Function Audit; Duplicate Function Audit; Framework Health Check.
Testing Review	Dashboard Quality Sections A-N generated or updated as applicable; Template Structure; Headers; Columns; Behaviors; Health; Master List; Care Plan Sync; Workflow Verification.
Performance Review	Spreadsheet reads/writes; formatting operations; sheet copies; participant loops; dashboard cache use; section writes; current Framework Timing Report reviewed.

Release Review Area	Required Checklist
Release Approval Criteria	No ReferenceErrors; no missing helpers/functions; no blocking Dashboard Quality failures; no failed health checks; no critical performance issue; release approval boundary observed.

Appendix H - Required Release Package

Package Area	Required Items
Required Release Information	Version Number; Release Date; Release Type; Author; Current Approved Production Script source.
Framework Delta Review	Governance deltas; implementation deltas; retired architecture avoided; cumulative framework continuity confirmed.
Change Documentation	Change Summary; Functions Added/Modified/Removed; Framework, Dashboard, Dashboard Quality, Validation, Timing, Template, and Synchronization components updated.
Audit Documentation	Architecture Audit; Helper Audit; Dependency Audit; Orphan/Duplicate Function Audit; Performance Audit; Framework Health Check.
Testing Documentation	Tests Executed; Dashboard Quality Section Results A-N; Pass/Fail counts; known issues; Care Plan Sync and workflow verification results.
Performance Documentation	Performance impact; expected runtime change; timing report summary; bottlenecks; optimization notes.
Required Deliverables	Full Replacement Script when applicable; TXT download; release notes; testing recommendations; framework health check; recommended next version.
Release Completion Standard	A release candidate is complete when all required package components are provided. Promotion to Current Approved Production Script remains an approval boundary.

Appendix I - Framework Decision Log

Decision	Status	Reason / Standard	Reference
Single File Architecture	Approved	Required through production stabilization; avoids unsupported modular redesign.	Section 16.D
Dashboard Driven Framework	Approved	Dashboard configuration governs production formatting and sheet behavior.	Sections 7-8
Dashboard Controlled Templates	Approved	Templates are generated and refreshed from dashboard configuration.	Sections 7-8, 20.A

Decision	Status	Reason / Standard	Reference
Template First Formatting	Approved	Monthly outputs inherit verified template formatting rather than rebuilding formatting repeatedly.	Section 20.A
Dashboard Controlled Column Standards	Approved	Widths, formats, visibility, alignment, and wrap behavior originate in dashboard definitions.	Section 8; Appendix A
Dashboard Configuration Loaded Once Per Process	Approved	Reduces repeated reads and participant-loop overhead.	Section 20.B
Verified Templates Are Formatting Authority	Approved	Output sheets inherit approved template formatting.	Section 20.A
Primary PMR Row Architecture	Approved	Participant-level synchronized data belongs on the Primary PMR Row.	Section 11.1
Master List Primary PMR Rows Only	Approved	Secondary operational Master List rows remain retired.	Section 11; Appendix B
Primary PMR Assignment in Raw Data Only	Approved	Primary PMR ownership is assigned in Raw Data and copied downstream.	Sections 11.1, 14
One Pass Processing Architecture	Approved	Read once, process once, and write once whenever practical.	Sections 11.2, 20
Demo P Copy-First / Process-Once Architecture	Approved	Demo P copies Raw Data first, processes once, and writes once.	Section 14
Demo P Update Tracking Columns	Approved	Demo P Update Status, Month, and Source Sheet remain governed fields.	Appendices A-C
Care Plan Two-Stage Sync	Approved	Unlock CP matches by PMR; Care Plan Due matches by participant name plus enrollment/capitation date.	Section 13; Appendix C
Dashboard Quality Consolidation	Approved	Current consolidated Dashboard Quality architecture uses Sections A-N.	Sections 7, 19; Appendix F

Decision	Status	Reason / Standard	Reference
Centralized Header Verification	Approved	Governed header verification replaces duplicated full-header checks in individual workflows.	Sections 8, 19; Appendix F
Section-Oriented Dashboard Quality Writes	Approved	Dashboard Quality uses approved section or batch updates rather than hidden-template recreation or repeated full rebuilds.	Sections 7, 19; Appendix F
Standalone Create Disenrolled List	Approved	Create Disenrolled remains standalone; retired repair architecture is not reintroduced.	Section 15; Appendices B-C
Current Disenrolled Governed Column Set	Approved	Disenrolled columns follow the current Format Dashboard and Appendix C mapping.	Appendix C
Full Replacement Production Updates	Approved	Production script deliveries are complete replacements unless a patch is explicitly requested.	Section 16
Testing Recommended After Every Update	Approved	Testing reduces deployment and regression risk.	Section 19
Performance Review Required Before Release	Approved	Timing and performance regressions must be identified before release.	Section 20
Protected Standards Enforcement	Approved	Protected standards cannot be removed, bypassed, or redesigned without approval.	Section 22

Appendices D-I Governance Note

These appendices document current production governance only. Any future change to sheet colors, names, Dashboard Quality ownership, release requirements, or protected architecture must first be approved in the production framework and then incorporated into the next governing specification revision.

Master List Framework Specification v2.0

Appendices J–L Fully Automated Governing Edition

Authority

Current Approved Production Script v1.6.74 and Framework Specification v2.0. Historical implementation references have been removed from current governance.

Appendix J – Current Production Status

Status Area	Current v2.0 Standard
Framework Status	Production Stabilization.

Current Approved Production Script	v1.6.74
Governing Specification	Framework Specification v2.0.
Architecture Status	Single File Architecture; Dashboard Driven Framework; Template First Formatting; Primary PMR Row Architecture; Master List Primary PMR Rows Only; One Pass Processing; Dashboard Quality Consolidation.
Development Focus	Maintain production stability; synchronize documentation with current framework; continue performance optimization.
Current Priority 1	Validate current production against Dashboard Quality Sections A–N.
Current Priority 2	Verify governed template headers against Format Dashboard.
Current Priority 3	Verify Care Plan synchronization validation.
Current Priority 4	Continue performance review of Demo P, Disenrolled, and synchronization workflows.

Appendix K – Current Open Items

Open Item	Status / Direction
Timing optimization of Demo P	Continue monitoring; copy-first/process-once/write-once remains governing architecture.
Timing optimization of Disenrolled	Continue monitoring; use governed template once.
Dashboard Quality updates	Continue section-oriented updates; no hidden-template creation or repeated full rebuild.
Template Header Validation	Verify against current Format Dashboard.
Care Plan Synchronization	Verify Unlock CP and Care Plan Due validation.
Appendix synchronization	Keep Appendices A–L synchronized with production framework.
Future modularization	Deferred until production stabilization completes.

Appendix L – Known Performance Findings

Confirmed Finding	Approved Production Standard
Repeated formatting operations	Template First Formatting using verified templates.
Repeated dashboard reads	Load dashboard configuration once per process.
Repeated spreadsheet read/write cycles	Read once, process once, write once.

Dashboard Quality hidden-template creation	Removed.
Dashboard Quality repeated rebuilds	Section-oriented updates only.
Repeated Demo P scans	Primary PMR assigned in Raw Data and copied downstream.
Repeated Banner synchronization passes	Removed from Demo P processing.
Repeated template creation	Use governed template once.
Monthly formatting rebuilds	Use verified templates and approved formatting paths.
