
Wave 6 — Maintainability, Diagnostics, and Documentation

Objective

Improve documentation alignment and regression-report automation.

Findings Resolved

- EXH-012
- EXH-014
- EXH-015

Files Affected

- Master_List/README.md or similar project documentation
- General/Scripts/README.md or script headers
- Report export scripts/output, if implemented

Functions Affected

- Timing/quality report writers if CSV/JSON export is added

Exact Proposed Changes

1. Add Master_List project README documenting:
 - governing production path: Current Production Script/
 - reports path
 - audit summary path
 - whether manifest is external or committed
2. Add General/Scripts README or headers explaining non-production/support status.
3. Add CSV/JSON/text companion exports for timing and quality reports.

Business-Logic Impact

None.

Breaking-Change Risk

None to Low.

Required Tests

- Documentation review.
- Report export generation.
- Diff report output across two runs.

Recommended Version Increment

No production version required for docs only.
If report writer code changes: v1.6.30 or later.

Independent?

Yes.

Required User Decisions

- Preferred report export format: CSV, JSON, Markdown, or all three?

6. User Decision Register

Decision ID	Required decision	Related findings	Why approval is required	Recommendation
UD-001	Raw Data import source policy: delete, archive, or retain after formatting?	EXH-004	Current code deletes import source after output creation; changing this affects workbook workflow and storage.	Prefer archive or retain until users confirm deletion is desired.

UD-002	Active-sheet fallback policy for Demo P build.	EXH-008	Removing fallback may break user habits; retaining fallback risks wrong-source processing.	Allow fallback only if active sheet passes strict Raw Data validation.
UD-003	Manifest strategy.	EXH-003	Project may be container-bound; adding manifest might duplicate external Apps Script state.	Export and commit appsscript.json if possible; otherwise document external manifest.
UD-004	Index trigger busy behavior.	EXH-009	Trigger can skip or defer refresh; behavior affects Index freshness.	Defer refresh and run once after workflow completion.
UD-005	Public API boundary.	EXH-010, EXH-011	Apps Script exposes top-level functions; removal/rename can break external callers.	Publish supported API list before cleanup.
UD-006	Compatibility-wrapper removal.	EXH-010, EXH-011	Removing wrappers can be breaking.	Do not remove wrappers in v1.6.30; classify only.
UD-007	Performance vs visual fidelity.	EXH-007	Formatting simplification may change workbook appearance.	Optimize non-visual hot spots first; request approval for visual concessions.
UD-008	Report export format.	EXH-012	CSV/JSON/Markdown each supports different consumers.	Add CSV and JSON companions for timing/quality data.
UD-009	Documentation scope for General/Scripts.	EXH-015	General scripts may be intentionally outside Master_List release scope.	Mark as non-production support utilities unless owner says otherwise.
