
Wave 5 — Duplicate, Dead, and Orphan-Code Cleanup

Objective

Classify broad public namespace and no-static-path functions without breaking public or dynamic consumers.

Findings Resolved

- EXH-010
- EXH-011

Files Affected

- Master_List/Current Production Script/v.1.6.29_Current_Production_Script
- Possible project documentation/API boundary file

Functions Affected

- 686 top-level functions in inventory
- 122 no-static-path functions in function inventory

Exact Proposed Changes

1. Publish supported public API list.
2. Classify all no-static-path functions:
 - supported public API
 - retained compatibility wrapper
 - deprecated
 - internal candidate
 - removal candidate
3. Do not remove functions until checking:

- direct callers
- indirect callers
- dynamic string references
- triggers
- menus
- HTML/google.script.run
- external consumers
- library consumers

4. Add compatibility wrappers before any rename.

Business-Logic Impact

None initially.

Breaking-Change Risk

High if actual removals/renames are attempted.

Required Tests

- Consumer compatibility review.
- Static/dynamic invocation search.
- Trigger/menu callback existence scan.
- Apps Script function execution smoke tests.

Recommended Version Increment

Documentation/classification only: v1.6.30 or separate documentation release.

Actual removals: later major/minor version after approval.

Independent?

Yes.

Required User Decisions

- Which functions are official supported APIs?
- Are deprecated public-looking functions allowed to remain indefinitely?
- Is removal of compatibility wrappers allowed in a future major version?
