

# System Sheet Architecture Specification

---

## Purpose

System Sheets are governed framework-owned sheets used to support dashboard management, quality assurance, timing analysis, validation reporting, synchronization diagnostics, and framework governance.

System Sheets are not participant-processing sheets.

System Sheets provide framework visibility, validation, auditability, and operational diagnostics.

## Header 3

*Subtitle*

---

## Governed System Sheets

The framework shall maintain the following governed system sheets:

|                            |
|----------------------------|
| None                       |
| Format Dashboard           |
| Dashboard Quality Report   |
| Framework Timing Report    |
| Master List Change Log     |
| Disenrolled Exclusion List |

Additional system sheets may be added through governance approval.

---

# System Sheet Ownership

| System Sheet               | Owner                       |
|----------------------------|-----------------------------|
| Format Dashboard           | Dashboard Architecture      |
| Dashboard Quality Report   | Dashboard Quality Framework |
| Framework Timing Report    | Timing Framework            |
| Master List Change Log     | Framework Logging           |
| Disenrolled Exclusion List | Disenrollment Workflow      |

System Sheets are framework-owned assets.

Business processing workflows shall not modify system sheet structures.

---

# System Sheet Lifecycle Rules

## Creation

System sheets shall be created through:

None

Set Up System Sheets

Only.

---

## Verification

System sheet structure verification shall occur through:

None

Dashboard Quality Start Up

System sheet verification shall not recreate system sheets.

System sheet verification shall not overwrite existing system sheet data.

---

## Maintenance

System sheets may be updated by:

None

Dashboard Quality

Framework Timing

Framework Logging

Synchronization Validation

Only within approved data blocks.

---

# Deletion Protection

System sheets shall not be deleted during normal framework execution.

System sheets shall not be recreated during normal framework execution.

System sheets shall not be rebuilt during validation execution.

---

# Fixed Block Architecture Standard

All governed report sheets shall use fixed block architecture.

Fixed block architecture prevents:

None

Row insertion

Row deletion

Section movement

Formatting drift

Section overwrite

---

# Dashboard Quality Report Architecture

## Report Title

Row 1:

None

Report Formatter Framework - <Framework Version> - Dashboard Quality Report

---

## Formatting

Title Row:

None

Arial 12 Bold

Fill Color #79b5d2

Subheader Row 1:

None

Arial 10 Bold

Fill Color #9fcadf

Subheader Rows 2-3:

None

Arial 10 Italic

Fill Color #c6dfec

Unused Cells:

None

#ecf4f9

Freeze:

None

1 Row

Outline:

None

#CCCCCC

System formatting standards are governed by approved formatting specifications.

---

# Dashboard Quality Section Rules

Each section shall contain:

## Row 1

Section Title

Example:

None

SECTION A - TEMPLATE VALIDATION

## Row 2

Timestamp Row

Example:

None

Last Updated Date and Time

## Row 3

Column Headers

Example:

None

Template Name | Status | Issue | Quality Notes

---

## Data Block

Data begins immediately below the section header block.

---

## Section Writer Rules

Each Dashboard Quality test owns only its assigned section.

Section ownership shall be governed by Framework Specification Section 8.2.

A writer may:

None

Update rows within its section block

A writer may not:

None

Insert rows

Delete rows

Move headers

Modify other sections

Rebuild the report

---

# Dashboard Quality Report Write Rules

Dashboard Quality Quick:

None

Sections A-E

Dashboard Quality Workflow:

None

Sections F-M

Summary Writers:

None

Sections I-J

Workflow Verification:

None

Section M

Each writer updates only its assigned section.

---

# Framework Timing Report Architecture

## Report Title

Row 1:

None

Report Formatter Framework - <Framework Version> Framework Timing Report

---

# Timing Report Section Structure

Every section shall contain:

## Row 1

Section Title

Example:

None

SECTION A - PROCESS EXECUTION SUMMARY

## Row 2

Timestamp

None

Last Updated Date and Time

## Row 3

Column Headers

Example:

None

Process | Runtime (Sec) | Status | Quality Notes

## Data Block

Timing data begins immediately below the section header block.

---

# Framework Timing Report Sections

None

SECTION A - Process Execution Summary

SECTION B - Timing Severity Analysis

SECTION C - Detailed Process Timing Log

SECTION D - Performance Findings

SECTION E - Optimization Recommendations

SECTION F - Timing Signoff

SECTION G - Timing Coverage Verification

SECTION H - Runtime Trend Summary

SECTION I - Framework Timing Summary

SECTION J - Framework Timing Signoff

---

## Timing Writer Rules

Timing writers may:

None

Write timing results

Update timestamps

Update summary values

Timing writers may not:

None

Insert rows

Delete rows

Rebuild the report

Modify dashboard sections

---

## Fixed Block Writer Governance

All system sheet writers shall follow fixed block architecture.

A writer may:

None

Clear data rows inside its assigned block

Rewrite data rows inside its assigned block

Update timestamps

Update statuses

A writer may not:

None

Insert rows

Delete rows

Shift sections

Move section headers

Recreate report structure

Rebuild report formatting

---

## Startup Verification Standard

Dashboard Quality Start Up shall verify:

None

Format Dashboard exists

Dashboard Quality Report exists

Framework Timing Report exists

Required sections exist

Required headers exist

Required formatting exists

Startup Verification shall not:

None

Rebuild reports

Delete reports

Recreate reports

Overwrite existing report data

---

## System Sheet Governance

System Sheets are protected framework assets.

Normal framework execution shall:

None

Maintain structure

Maintain section ownership

Maintain formatting

Maintain fixed block architecture

System sheet structure modifications require governance approval.

System sheet writers shall be section-based writers only.

Full report rebuilds are prohibited during normal framework execution.
